The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

23 September 2024 601 / 1476

i) Robeco QI Emerging Markets Enhanced Index Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Emerging Markets
Enhanced Index Equities

Legal entity identifier: 213800STP25QHMJ2GM65

Environmental and/or social characteristics

Doe	Does this financial product have a sustainable investment objective?				
••	Yes	• No			
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective			
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments			

23 September 2024 602 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
- 4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

23 September 2024 603 / 1476

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 604 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

and employee

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:

23 September 2024

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco QI Emerging Markets Enhanced Index Equities is an actively managed fund that invests in stocks of companies in emerging markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

S2978D-202409

23 September 2024 606 / 1476

- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

Asset allocation describes the share of

Good governance

practices include

relations,

sound management

structures, employee

remuneration of staff and tax compliance.

investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

23 September 2024 607 / 1476

activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels

Does the financial product invest in fossil gas and/or nuclear energy related activitie that comply with the EU Taxonomy? ¹¹				
Yes				

In fossil gas In nuclear energy

23 September 2024 608 / 1476

¹¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

23 September 2024 609 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective			
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments			

23 September 2024 611 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
- 4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).
- 6. The Sub-fund's weighted average ESG score compared to the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

23 September 2024 612 / 1476

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 613 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

•	Yes,	
*	163,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- o Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Principal adverse

impacts are the most

23 September 2024 614 / 1476

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Emerging Conservative Equities is an actively managed fund that invests in low-volatility stocks in emerging countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 3. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk

tolerance.

S2978D-202409

23 September 2024 615 / 1476

- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

Asset allocation

Good governance

practices include

relations,

sound management

structures, employee

remuneration of staff and tax compliance.

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

23 September 2024 616 / 1476

activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy? ¹²
Yes

In fossil gas In nuclear energy

23 September 2024 617 / 1476

¹² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

23 September 2024 618 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

k) Robeco QI Global Value Equities

Equities

Product name: Robeco QI Global Value

It will make a minimum of

social objective: ___%

sustainable investments with a

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 2138008GOSJ2FFNDBA15

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics Does this financial product have a sustainable investment objective? Yes **≭** No It will make a minimum of It promotes Environmental/Social (E/S) sustainable investments with an **characteristics** and while it does not have as environmental objective: % its objective a sustainable investment, it will have a minimum proportion of 50% of in economic activities that sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in Taxonomy economic activities that qualify as environmentally sustainable under the EU in economic activities that do Taxonomy not qualify as environmentally sustainable under the EU with an environmental objective in Taxonomy economic activities that do not qualify as environmentally sustainable under the EU

make any sustainable investments

It promotes E/S characteristics, but will not

23 September 2024 620 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
- 4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

23 September 2024 621 / 1476

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 622 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- o Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

S2978D-202409

o Via Robeco's entity engagement program, the following PAIs are considered:

23 September 2024 623 / 1476

Principal adverse

impacts of

impacts are the most significant negative

investment decisions on sustainability

environmental, social

human rights, anti-

corruption and anti-

bribery matters.

factors relating to

and employee matters, respect for

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)

In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Global Value Equities is an actively managed fund that invests in stocks in developed and emerging countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 3. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

32978D-202409

23 September 2024 624 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Asset allocation describes the share of investments in

specific assets.

Good governance practices include

sound management

structures, employee

remuneration of staff and tax compliance.

relations,

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- expenditure (OpEx) reflecting green operational

23 September 2024 625 / 1476

activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels

th	that comply with the EU Taxonomy? ¹³			
	Yes			
		In fossil gas		In nuclear energy
*	. No			

23 September 2024 626 / 1476

¹³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

23 September 2024 627 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

23 September 2024 628 / 1476

I) Robeco QI Global Developed Multi-Factor Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Developed Legal entity identifier: 2138004BTUICV15VA168 **Multi-Factor Equities**

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?			
•	Yes	• No	
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

23 September 2024 629 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
- 4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

23 September 2024 630 / 1476

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 631 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

•	Yes,	
	ıcs,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of
 this PAI is currently restricted to applying exclusions to palm oil producing companies and for
 any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation
 to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:

and employee matters, respect for human rights, anticorruption and antibribery matters.

factors relating to

S2978D-202409

23 September 2024 632 / 1476

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco QI Global Developed Multi-Factor Equities is an actively managed fund that invests in stocks in developed countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

32978D-202409

23 September 2024 633 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

Asset allocation

Good governance practices include

sound management

structures, employee

remuneration of staff and tax compliance.

relations,

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

23 September 2024 634 / 1476

activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels

Yes

In fossil gas

In nuclear energy

No

23 September 2024 635 / 1476

¹⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

23 September 2024 636 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

23 September 2024 637 / 1476

m) Robeco QI Emerging Markets Sustainable Active Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Emerging Markets
Sustainable Active Equities

Legal entity identifier: 549300CZ8S23ZD8TW786

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?			
•	Yes	• No	
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

23 September 2024 638 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 2. The Sub-fund promotes having a substantially lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index").
- 3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 5. The Sub-fund promotes investment in a portfolio that avoid significant harm to the Sustainable Development Goals (SDGs).
- 6. The Sub-fund has a substantially better weighted average ESG score than the General Market Index.
- 7. The Sub-fund promotes having a substantially larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market
- 3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 5. The proportion of companies that hold a high or medium negative SDG score (-3 or -2) based on the internally developed SDG Framework.
- 6. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in

23 September 2024 639 / 1476

creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 640 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

and employee

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	
---	------	--

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of
 this PAI is currently restricted to applying exclusions to palm oil producing companies and for
 any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation
 to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)

23 September 2024 641 / 1476

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Emerging Markets Sustainable Active Equities is an actively managed fund that invests in stocks of companies in emerging markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 2. The Sub-fund's weighted water and waste footprint score is at least 20% better than that of the General Market Index. The Sub-fund's weighted carbon footprint score is at least 30% better than that of the General Market Index.
- 3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

S2978D-202409

23 September 2024 642 / 1476

- 5. The Sub-fund excludes all high or medium negative SDG scores (-3 or -2) based on the internally developed SDG Framework.
- 6. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index.
- 7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is at least 10% better than that of the General Market Index, measured as a ratio.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation

describes the share of investments in specific assets.

32978D-202409

23 September 2024 643 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 644 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?¹⁵

Yes
In fossil gas
In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 645 / 1476

S2978D-202409

¹⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

n) Robeco QI Global Developed Conservative Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Developed Conservative Equities

Legal entity identifier: 213800WBAS5AB8ING173

23 September 2024 648 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index
- 4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

23 September 2024 649 / 1476

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 650 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	
---	------	--

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

S2978D-202409

o Via Robeco's entity engagement program, the following PAIs are considered:

23 September 2024 651 / 1476

factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Principal adverse

impacts of

impacts are the most significant negative

investment decisions on sustainability

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Global Developed Conservative Equities is an actively managed fund that invests in low-volatility stocks in developed countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The Sub-fund has the following binding elements:

- 1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 3. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

\$2978D-202409

23 September 2024 652 / 1476

- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-qovernance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

Asset allocation

Good governance

practices include

relations,

sound management

structures, employee

remuneration of staff and tax compliance.

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure
 (CapEx) showing
 the green
 investments made
 by investee
 companies, e.g. for
 a transition to a
 green economy.
- operational expenditure (OpEx) reflecting green operational

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

23 September 2024 653 / 1476

activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

No

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035.

Does the financial product invest in fossil gas and/or nuclear energy related activities
that comply with the EU Taxonomy? ¹⁶
Yes

In fossil gas In nuclear energy

23 September 2024 654 / 1476

¹⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

23 September 2024 655 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

o) Robeco QI Global Developed Active Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Developed Legal entity identifier: 213800IXA2GLSM2Z7310
Active Equities

23 September 2024 657 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- The Sub-fund promotes certain minimum environmental and social safeguards through applying
 exclusion criteria with regards to products and business practices that Robeco believes are
 detrimental to society and incompatible with sustainable investment strategies, such as exposure
 to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
- 4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

23 September 2024 658 / 1476

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 659 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	
**	,	 _

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)

significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Principal adverse

impacts are the most

23 September 2024 660 / 1476

- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco QI Global Developed Active Equities is an actively managed fund that invests in stocks in developed countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 661 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category ~#1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure
 (CapEx) showing
 the green
 investments made
 by investee
 companies, e.g. for
 a transition to a
 green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational

23 September 2024 662 / 1476

activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

Nο

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power

t	that comply with the EU Taxonomy? ¹⁷			
	Yes			
		In fossil gas		In nuclear energy

¹⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

23 September 2024 664 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

p) Robeco QI Customized Emerging Markets Enhanced Index Equities I

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Customized
Emerging Markets Enhanced Index Equities I

23 September 2024 666 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
- 3. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 4. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 667 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 668 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

•	Yes,	
•	103,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 669 / 1476

 In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Customized Emerging Markets Enhanced Index Equities I is an actively managed fund that invests in stocks of companies in emerging markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 2. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

23 September 2024 671 / 1476

hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?¹⁸

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

 0%.

corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentaly sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure Not applicable.

23 September 2024 673 / 1476

q) Robeco QI Global Quality Equities

Product name: Robeco QI Global Quality

It will make a minimum of

social objective: ___%

sustainable investments with a

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 2138007QXX6VPXTZMR14

It promotes E/S characteristics, but will not

make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Equities Environmental and/or social characteristics Does this financial product have a sustainable investment objective? Yes No It will make a minimum of It promotes Environmental/Social (E/S) sustainable investments with an **characteristics** and while it does not have as environmental objective: % its objective a sustainable investment, it will have a minimum proportion of 50% of in economic activities that sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in Taxonomy economic activities that qualify as environmentally sustainable under the EU in economic activities that do Taxonomy not qualify as environmentally sustainable under the EU with an environmental objective in Taxonomy economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective

23 September 2024 675 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
- 4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

23 September 2024 676 / 1476

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 677 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

and employee matters, respect for

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	
---	------	--

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
 - Via Robeco's entity engagement program, the following PAIs are considered:

678 / 1476

23 September 2024

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Global Quality Equities is an actively managed fund that invests in stocks in developed and emerging countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 3. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 679 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docurobeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected the exclusion list that accessed https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational

23 September 2024 680 / 1476 activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

O%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels

Does the financial product invest in fossil gas and/or nuclear energy related activities
that comply with the EU Taxonomy? ¹⁹

	Yes		
		In fossil gas	In nuclear energ
••	No		

23 September 2024 681 / 1476

¹⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

23 September 2024 682 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

r)Robeco QI Global SDG & Climate Conservative Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

The **EU Taxonomy**

Product name: Robeco QI Global SDG & Climate Conservative Equities

Legal entity identifier: 213800BVPSWSGDFYVC36

Sustainable investment objective

Does this financial product have a sustainable investment objective?				
••	×	Yes	••	No
×	susta	I make a minimum of sinable investments with an conmental objective: 50% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	i I	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
×	susta	I make a minimum of sinable investments with a I objective: 10%		It promotes E/S characteristics, but will not make any sustainable investments

23 September 2024 684 / 1476

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

What is the sustainable investment objective of this financial product?

The Sub-fund advances the United Nation's Sustainable Development Goals (SDGs) and the Sub-fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris Agreement to keep the maximum global temperature rise well-below 2°C. The Sub-fund has a carbon-reduction objective and uses the MSCI All Country World EU PAB Overlay Index to monitor the carbon profile of the Sub-fund.

A part of the investments made by the Sub-fund contribute to the environmental objective of Climate Mitigation under the EU Taxonomy regulation.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The Sub-fund's weighted carbon footprint score compared to the Paris-Aligned Benchmark.
- 3. The Sub-fund's weighted environmental footprint score compared to the general market index referred to in Appendix VI Benchmarks (the "General Market Index").
- 4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 5. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 6. The proportion of companies that hold a negative SDG score (-3, -2 or -1) based on the internally developed SDG Framework.
- 7. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 8. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris-Aligned Benchmark follow eligibility requirements as per Article 12 of the EU regulation EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Sustainable investments can be constituents of Paris-Aligned Benchmark. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis.

23 September 2024 685 / 1476

Sustainable investments that are not constituents of Paris-Aligned Benchmark, should all have a positive score on Robeco's SDG Framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy, Robeco's SDG Framework, and the methodology of the benchmark provider.

Principal adverse

negative impacts of

impacts are the most significant

investment

decisions on

sustainability factors relating to

environmental.

social and employee matters, respect for

human rights, anti-

corruption and anti-

bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration
 of this PAI is currently restricted to applying exclusions to palm oil producing companies and
 for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in
 relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1), via the Paris-Aligned Benchmark
 - Water and waste indicators (PAI 8-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

23 September 2024 686 / 1476

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Global SDG & Climate Conservative Equities is an actively managed fund that invests globally in low-volatility stocks of companies that advance the United Nations Sustainable Development Goals (SDGs) and contribute to maintaining the global temperature rise below 2°C. The Sub-fund's long-term aim is to achieve returns equal to, or greater than, those on global equity markets with lower expected downside risk. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- 1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 2. The Sub-fund's weighted carbon footprint score is better than that of the Paris-Aligned Benchmark.
- 3. The Sub-fund's weighted water and waste footprint score is at least 20% better than that of the General Market Index.
- 4. The Sub-fund fully complies with activity based exclusions with regards to products (including controversial weapons, tobacco, palm oil, and thermal coal, upstream oil and gas and electricity producers in line with Article 12 of the EU regulation Climate Transition Benchmarks, EU Parisaligned Benchmarks and sustainability-related disclosures for benchmarks). In addition, the Subfund's portfolio complies with Robeco's Exclusion Policy

23 September 2024 687 / 1476

(https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf

- 5. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 6. The Sub-fund excludes all negative SDG scores (-3, -2 or -1).
- 7. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index.
- 8. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is at least 20% better than that of the General Market Index, measured as a ratio.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- capital expenditure (CapEx) showing the green

23 September 2024 688 / 1476

investments made by investee companies, e.g. for a transition to a green economy.

- operational
expenditure
(OpEx) reflecting
green operational
activities of
investee
companies.

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the climate change mitigation objective under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon

Does the financial product invest in fossil gas and/or nuclear energy related activities

×	No		

23 September 2024 689 / 1476

²⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are
sustainable
investments with an
environmental
objective that do
not take into
account the criteria
for environmentally
sustainable
economic activities

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%

The Sub-fund makes sustainable investments with environmental objectives that do not qualify as Taxonomy-aligned. Given the Sub-fund's investment strategy and the specific environmental investment objective, the Sub-fund commits to a minimum share of sustainable investments of 50% with an environmental objective. The environmental objectives of the Sub-fund are attained by investing in companies, in line with a low carbon scenario stipulated by the Paris-aligned benchmark methodology.

In addition, the Sub-fund intends to make sustainable investments off-benchmark, measured as positive scores via Robeco's SDG Framework. Among those could be sustainable investments with environmental objectives which are companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

The sum of sustainable investments with an environmental objective and socially sustainable investments will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Within the off-benchmark holdings (i.e. holdings that are not part of the Paris-Aligned Benchmark), the Sub-fund intends to make sustainable investments with a social objective. Given the Sub-fund's investment strategy and the specific social investment objective, the Sub-fund commits to a minimum share of sustainable investments of 10% with a social objective, measured by off-benchmark holdings that have a positive score via Robeco's SDG Framework. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger),

23 September 2024 690 / 1476

under the EU Taxonomy.

SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Yes, the Sub-fund uses the MSCI All Country World EU PAB Overlay Index as a reference index to meet the carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The MSCI EU PAB Overlay Indices are constructed from their corresponding Parent Indexes using an optimization-based approach and aim to:

- Reduce the weighted average greenhouse gas intensity by 50% compared to the underlying investment universe.
- Reduce the weighted average greenhouse gas (GHG) intensity by 7% on an annualized basis.
- Achieve a modest tracking error compared to the Parent Index and low turnover.
- Exclude companies based on the following criteria: Companies involved in Controversial Weapons businesses, Very Severe ESG Controversies, Severe Environmental Controversies, Tobacco Manufacturing, Thermal Coal, Oil & Gas and Fossil Fuel-based power generation.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The methodology of the reference index follows rebalancing rules which ensures alignment with the investment strategy and objective of the Sub-fund. The index uses data such as MSCI Climate Change Metrics, MSCI Climate Value-at-Risk, MSCI ESG Sustainable Impact Metrics, MSCI ESG Controversies

23 September 2024 691 / 1476

and MSCI Business Involvement Screening Research) as of the end of the month, preceding the Index Reviews, for the rebalancing of the index.

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

How does the designated index differ from a relevant broad market index?

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and carbon footprint of companies.

Where can the methodology used for the calculation of the designated index be found?

The index methodology can be found on the relevant webpages by the index provider: https://www.msci.com

Where can I find more product specific information online?

23 September 2024 692 / 1476

s) Robeco QI Global Developed Enhanced Index Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Developed Enhanced Index Equities

Legal entity identifier: 213800W6NOMU3QTJAP16

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?				
Yes	• No			
It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	 It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective 			
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments			

23 September 2024 693 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- The Sub-fund promotes certain minimum environmental and social safeguards through applying
 exclusion criteria with regards to products and business practices that Robeco believes are
 detrimental to society and incompatible with sustainable investment strategies, such as exposure
 to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market
- The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 4. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 694 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 695 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

-	Yes,	
	ı CJ,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
 - Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 696 / 1476

 In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco QI Global Developed Enhanced Index Equities is an actively managed fund that invests in stocks of companies in developed markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 2. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

23 September 2024 697 / 1476

S2978D-202409

Good governance

practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of
 investee
 companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and

23 September 2024 698 / 1476

currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?²¹

Yes

In fossil gas In nuclear energy

≭ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

EU Taxonomy.

criteria for

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

23 September 2024 700 / 1476

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

23 September 2024 702 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund promotes having a substantially lower carbon footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index").
- 5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The Sub-fund's weighted carbon footprint score compared to the General Market Index.
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 6. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

23 September 2024 703 / 1476

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 704 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
 - Board gender diversity (PAI 13, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 705 / 1476

 In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Sustainable Emerging Stars Equities is an actively managed fund that invests in equities in emerging countries across the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC
 or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms
 will be excluded from the investment universe.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 4. The Sub-fund's weighted carbon footprint score is 20% better than that of the General Market Index.
- 5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 6. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 5% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

S2978D-202409

23 September 2024 706 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category ~#1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of

23 September 2024 707 / 1476

investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

O%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

	Does the financial product invest in fossil gas and/or nuclear energy related activities
	that comply with the EU Taxonomy? ²²

Yes

In fossil gas In nuclear energy

23 September 2024 708 / 1476

²² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

×

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?
 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific

23 September 2024 709 / 1476

socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

u) Robeco QI Emerging Markets Sustainable Enhanced Index Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Emerging Markets Sustainable Enhanced Index Equities

Legal entity identifier: 213800F1WPR2PVBY1880

Environmental and/or social characteristics

Doe	Does this financial product have a sustainable investment objective?			
•	Yes	• No		
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective		
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments		

23 September 2024 711 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- 1. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 2. The Sub-fund promotes having a substantially lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index").
- 3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 5. The Sub-fund promotes investment in a portfolio that avoid significant harm to the Sustainable Development Goals (SDGs).
- 6. The Sub-fund has a substantially better weighted average ESG score than the General Market Index.
- 7. The Sub-fund promotes having a substantially larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The number of holdings and agenda items voted.
- 2. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index
- 3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 5. The proportion of companies that hold a high or medium negative SDG score (-3 or -2) based on the internally developed SDG Framework.
- 6. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in

23 September 2024 712 / 1476

creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 713 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:

23 September 2024

714 / 1476

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Emerging Markets Sustainable Enhanced Index Equities is an actively managed fund that invests in stocks of companies in emerging markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund uses a stock selection strategy which ranks stocks on their expected future relative performance using three factors: valuation, quality and momentum. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 2. The Sub-fund's weighted water and waste footprint score is at least 20% better than that of the General Market Index. The Sub-fund's weighted carbon footprint score is at least 30% better than that of the General Market Index.
- 3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 5. The Sub-fund excludes all high or medium negative SDG scores (-3 or -2) based on the internally developed SDG Framework.
- 6. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 715 / 1476

- 7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is at least 10% better than that of the General Market Index, measured as a ratio.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Good governance practices include sound management structures, employee relations, remuneration of staff

and tax compliance.

Asset allocation describes the

share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure
 (CapEx) showing
 the green
 investments made
 by investee
 companies, e.g. for
 a transition to a
 green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational

23 September 2024 716 / 1476

activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

No

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels

Does the financial product invest in fossil gas and/or nuclear energy relathat comply with the EU Taxonomy? ²³	
	Yes

In fossil gas In nuclear energy

23 September 2024 717 / 1476

²³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

23 September 2024 718 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

v) Robeco Global SDG Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

*	susta	inable investments with an onmental objective: 1% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	i	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
*	susta	make a minimum of inable investments with a lobjective: 50%		It promotes E/S characteristics, but will not make any sustainable investments

23 September 2024 720 / 1476

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

What is the sustainable investment objective of this financial product?

The Sub-fund's sustainable investment objective is to advance the United Nations Sustainable Development Goals (UN SDGs) by investing in companies whose business models and operational practices are aligned with targets defined by the 17 UN SDGs.

Sub-fund does not have a carbon-reduction objective and there is no reference benchmark designated for the purpose of attaining the sustainable objective promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- The number of companies with a positive SDG score based on the internally developed SDG Framework.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 4. The number of holdings and agenda items voted.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

23 September 2024 721 / 1476

Principal adverse

bribery matters.

environmental,

impacts are the most significant

investment

decisions on sustainability

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Global SDG Equities is an actively managed fund that invests globally in companies that take action to advance the UN Sustainable Development Goals. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment

23 September 2024 722 / 1476

objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- 1. The Sub-fund solely invests in companies with a positive SDG score.
- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 723 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- expenditure
 (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure
 (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures, this will be done based on turnover. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy²⁴?

Yes:

In fossil gas

In nuclear energy

No

23 September 2024 724 / 1476

²⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commits to a minimum share of sustainable investments of 1% with an environmental objective because the Sub-fund's investment strategy does have an environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially sustainable investments always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 50% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

23 September 2024 725 / 1476

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

w) Robeco Global SDG Engagement Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global SDG Legal entity identifier: 2138007Y9W8ZM0EU0L93 Engagement Equities

Does this infancial product have a sustainable investment objective:		
•	Yes	• No
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	 It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

23 September 2024 727 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes investment in a portfolio that avoid significant harm, and aim to improve their contribution, to the Sustainable Development Goals (SDGs).
- 2. The Sub-fund promotes driving a clear and measurable improvement in a company's contribution to the United Nations Sustainable Development Goals (SDGs) over three to five years by performing engagement.
- 3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 5. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of companies with a SDG score of -1, 0 (zero) or +1 based on the internally developed SDG Framework.
- 2. The number of companies actively engaged.
- 3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 5. The number of holdings and agenda items voted.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 728 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 729 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of
 this PAI is currently restricted to applying exclusions to palm oil producing companies and for
 any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation
 to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Principal adverse

impacts of

impacts are the most significant negative

S2978D-202409

23 September 2024 730 / 1476

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Global SDG Engagement Equities is an actively managed fund that invests in a concentrated selection of global stocks. Stock selection is based on fundamental analysis to invest in companies that are best able to have a clear and measurable improvement in their contribution to the United Nations Sustainable Development Goals (UN SDGs) over three to five years via active engagement, as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund is solely invested in companies that hold a -1, 0 (zero) or positive SDG score. The Sub-fund excludes all high or medium negative SDG scores (-3 or -2) and all high or medium positive SDG scores (+3 or +2) for selection of new investment cases based on the internally developed SDG Framework.
 - The Sub-fund can only hold high or medium positive SDG scores (+3 and +2) when a company receives an upgrade of their SDG score after successfully completed engagement that started with an initial -1, 0 or +1 SDG score at investment. The Sub-fund can hold up to 20% of such holdings that are rated SDG (+3 and +2) after engagement has been successful for a period of 6 months.
 - (Successfully completed engagement: When a company progresses on the targets identified and fulfills the key performance indicators as established at the start of the engagement. Such targets can be linked with internal frameworks like the SDG framework).
- 2. The Sub-fund actively engages with 100% of the corporate holdings in the portfolio, typically for a period of 3 to 5 years. The engagement trajectories are assessed annually, considering the progress of pre-determined objectives that focus on contributing to specific sub targets of the SDGs. Once the company in scope falls out of the universe as a result of (a) a successful engagement (resulting in

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 731 / 1476

- higher SDG scores) or (b) an unsuccessful engagement, then a selling strategy will be designed for divestment.
- 3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 5. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 732 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 733 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?²⁵

Yes
In fossil gas
In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 734 / 1476

S2978D-202409

²⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

x) Robeco QI Emerging Markets Sustainable Enhanced Index Equities II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Emerging Markets Sustainable Enhanced Index Equities II

Legal entity identifier: 213800G3D5YDMZG9Z661

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
••	Yes	• No
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

23 September 2024 737 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- The Sub-fund promotes having a substantially lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
- 3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 5. The Sub-fund promotes investment in a portfolio that avoid significant harm to the Sustainable Development Goals (SDGs).
- 6. The Sub-fund has a substantially better weighted average ESG score than the General Market Index.
- 7. The Sub-fund promotes having a substantially larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
- 3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 5. The proportion of companies that hold a high or medium negative SDG score (-3 or -2) based on the internally developed SDG Framework.
- 6. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

23 September 2024 738 / 1476

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 739 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

S2978D-202409

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

Via the application of the voting policy, the following PAIs are considered:

23 September 2024 740 / 1476

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Emerging Markets Sustainable Enhanced Index Equities II is an actively managed fund that invests in stocks of companies in emerging markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund uses a stock selection strategy which ranks stocks on their expected future relative performance using three factors: valuation, quality and momentum. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 2. The Sub-fund's weighted water and waste footprint score is at least 20% better than that of the General Market Index. The Sub-fund's weighted carbon footprint score is at least 30% better than that of the General Market Index.
- 3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 5. The Sub-fund excludes all high or medium negative SDG scores (-3 or -2) based on the internally developed SDG Framework.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 741 / 1476

- 6. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index
- 7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is at least 10% better than that of the General Market Index, measured as a ratio.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-qovernance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 742 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 743 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?²⁶

Yes
In fossil gas
In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 744 / 1476

S2978D-202409

²⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

y) Robeco QI Global SDG & Climate Beta Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation

does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global SDG & Climate Beta Equities

Legal entity identifier: 213800PTYQMOZRCQMR91

Sustainable investment objective

Does this financial product have a sustainable investment objective?			
•• × Yes	• No		
It will make a minimum of sustainable investments environmental objective in economic activities qualify as environmental sustainable under the Taxonomy in economic activities not qualify as environ sustainable under the Taxonomy	characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments EU with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy		
x It will make a minimum o sustainable investments social objective: 10%			

23 September 2024 747 / 1476

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund advances the United Nation's Sustainable Development Goals (SDGs) and the Sub-fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris Agreement to keep the maximum global temperature rise well-below 2°C. The Sub-fund has a carbon-reduction objective and uses the MSCI All Country World EU PAB Overlay Index to monitor the carbon profile of the Sub-fund.

A part of the investments made by the Sub-fund contribute to the environmental objective of Climate Mitigation under the EU Taxonomy regulation.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The Sub-fund's weighted carbon footprint score compared to the Paris-Aligned Benchmark.
- 3. The Sub-fund's weighted environmental footprint score compared to the general market index referred to in Appendix VI Benchmarks (the "General Market Index").
- 4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 5. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 6. The proportion of companies that hold a negative SDG score (-3, -2 or -1) based on the internally developed SDG Framework.
- 7. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 8. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris-Aligned Benchmark follow eligibility requirements as per Article 12 of the EU regulation EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Sustainable investments can be constituents of Paris-Aligned Benchmark. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)

23 September 2024 748 / 1476

- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis.

Sustainable investments that are not constituents of Paris-Aligned Benchmark, should all have a positive score on Robeco's SDG Framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy, Robeco's SDG Framework, and the methodology of the benchmark provider.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	
~	1 03,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration
 of this PAI is currently restricted to applying exclusions to palm oil producing companies and
 for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in
 relation to biodiversity.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 749 / 1476

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1), via the Paris-Aligned Benchmark
 - Water and waste indicators (PAI 8-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- O Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco QI Global SDG & Climate Beta Equities is an actively managed fund that invests globally in stocks of companies that advance the United Nations Sustainable Development Goals (SDGs) and contribute to maintaining the global temperature rise below 2° C. Beta stands for the investment management approach of the Sub-fund that follows the performance of MSCI All Country World Index, allowing for the expression of both

positive and negative views on companies by overweighting and underweighting stocks in the MSCI All Country World Index with the sole purpose of pursuing the sustainable investment objectives of the Sub-fund.

The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 750 / 1476

framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- 1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 2. The Sub-fund's weighted carbon footprint score is better than that of the Paris-Aligned Benchmark.
- 3. The Sub-fund's weighted water and waste footprint score is at least 20% better than that of the General Market Index.
- 4. The Sub-fund fully complies with activity based exclusions with regards to products (including controversial weapons, tobacco, palm oil, and thermal coal, upstream oil and gas and electricity producers in line with Article 12 of the EU regulation Climate Transition Benchmarks, EU Parisaligned Benchmarks and sustainability-related disclosures for benchmarks). In addition, the Subfund's portfolio complies with Robeco's Exclusion (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 5. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 6. Sub-fund excludes all negative SDG scores (-3, -2 or -1).
- 7. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market
- 8. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is at least 20% better than that of the General Market Index, measured as a ratio.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

sound

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, measured either by holdings that are part of the Paris-Aligned Benchmark or holdings that have a positive score via Robeco's SDG

23 September 2024 751 / 1476

of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- capital
 expenditure
 (CapEx) showing
 the green
 investments
 made by investee
 companies, e.g.
 for a transition to
 a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the climate change mitigation objective under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 752 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling
activities directly
enable other
activities to make
a substantial
contribution to an
environmental
objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy²⁷?

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund makes sustainable investments with environmental objectives that do not qualify as Taxonomy-aligned. Given the Sub-fund's investment strategy and the specific environmental investment objective, the Sub-fund commits to a minimum share of sustainable investments of 50% with an environmental objective. The environmental objectives of the Sub-fund are attained by investing in companies, in line with a low carbon scenario stipulated by the Paris-aligned benchmark methodology.

In addition, the Sub-fund intends to make sustainable investments off-benchmark, measured as positive scores via Robeco's SDG Framework. Among those could be sustainable investments with environmental objectives which are companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

The sum of sustainable investments with an environmental objective and socially sustainable investments will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

23 September 2024 753 / 1476

S2978D-202409

²⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

Within the off-benchmark holdings (i.e. holdings that are not part of the Paris-Aligned Benchmark), the Sub-fund intends to make sustainable investments with a social objective. Given the Sub-fund's investment strategy and the specific social investment objective, the Sub-fund commits to a minimum share of sustainable investments of 10% with a social objective, measured by off-benchmark holdings that have a positive score via Robeco's SDG Framework. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective. Yes, the Sub-fund uses the MSCI All Country World EU PAB Overlay Index as a reference index to meet the carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The MSCI EU PAB Overlay Indices are constructed from their corresponding Parent Indexes using an optimization-based approach and aim to:

 Reduce the weighted average greenhouse gas intensity by 50% compared to the underlying investment universe.

23 September 2024 754 / 1476

- Reduce the weighted average greenhouse gas (GHG) intensity by 7% on an annualized basis.
- Achieve a modest tracking error compared to the Parent Index and low turnover.
- Exclude companies based on the following criteria: Companies involved in Controversial Weapons businesses, Very Severe ESG Controversies, Severe Environmental Controversies, Tobacco Manufacturing, Thermal Coal, Oil & Gas and Fossil Fuel-based power generation.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The methodology of the reference index follows rebalancing rules which ensures alignment with the investment strategy and objective of the Sub-fund. The index uses data such as MSCI Climate Change Metrics, MSCI Climate Value-at-Risk, MSCI ESG Sustainable Impact Metrics, MSCI ESG Controversies and MSCI Business Involvement Screening Research) as of the end of the month, preceding the Index Reviews, for the rebalancing of the index.

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

How does the designated index differ from a relevant broad market index?

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and carbon footprint of companies.

Where can the methodology used for the calculation of the designated index be found?

The index methodology can be found on the relevant webpages by the index provider: https://www.msci.com

Where can I find more product specific information online?

23 September 2024 755 / 1476

z) Robeco Quantum Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Quantum Equities Legal entity identifier: 2138009S4X65QC6GSJ11

23 September 2024 756 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments

23 September 2024 757 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 758 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

🗶 Yes,	×	Yes,	
--------	---	------	--

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

factors relating to

and employee matters, respect for

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Quantum Equities is an actively managed fund that invests in stocks mainly in developed markets. The selection of these stocks is based on quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Quantum' stands for the investment management approach of the Sub-fund that incorporates novel datasets, machine learning techniques and smart algorithms. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 760 / 1476

- 4. The Sub-fund's weighted carbon, water and waste footprint score is better than that of the General Market Index.
- 5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

[0]

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation

describes the

share of

Good governance

practices include

relations,

sound management

structures, employee

remuneration of staff and tax compliance.

activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

23 September 2024 761 / 1476

operational activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy? ²⁸				
	Yes			

	In fossil gas	In nuclear energy
** No		

23 September 2024 762 / 1476

²⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the

EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

23 September 2024 763 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

23 September 2024 765 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 766 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 767 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

S2978D-202409

23 September 2024 768 / 1476

Principal adverse

factors relating to environmental, social

- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Emerging Markets ex China Equities is an actively managed fund that invests in stocks in emerging countries across the world with the exception of China. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

S2978D-202409

23 September 2024 769 / 1476

accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk- policy.pdf). The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docurobeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance are reflected in the exclusion list that can

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations. remuneration of staff and tax compliance.

Asset allocation describes the share of investments in

specific assets.

23 September 2024 770 / 1476 Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 771 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?²⁹

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%. Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 772 / 1476

²⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

bb) Robeco Emerging Markets SDG Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental or
social objective,
provided that the
investment does not
significantly harm
any environmental or
social objective and
that the investee
companies follow
good governance

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation

practices.

does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Emerging Markets Legal entity identifier: N/A SDG Equities

Sustainable investment objective

Does this financial product have a sustainable investment objective?			
••	* Yes	• No	
*	It will make a minimum of sustainable investments with an environmental objective: 1% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
×	It will make a minimum of sustainable investments with a social objective: 50%	It promotes E/S characteristics, but will not make any sustainable investments	

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund's sustainable investment objective is to advance the United Nations Sustainable Development Goals (UN SDGs) by investing in companies whose business models and operational practices are aligned with targets defined by the 17 UN SDGs.

Sub-fund does not have a carbon-reduction objective and there is no reference benchmark designated for the purpose of attaining the sustainable objective promoted by the Sub-fund.

23 September 2024 775 / 1476

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- The number of companies with a low, medium or high positive SDG score based on the internally developed SDG Framework.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 4. The number of holdings and agenda items voted.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

23 September 2024 776 / 1476

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and anti-

bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Emerging Markets SDG Equities is an actively managed fund that invests in emerging markets companies that take action to advance the UN Sustainable Development Goals. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 777 / 1476

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- 1. The Sub-fund solely invests in companies with a positive SDG score.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax

compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies

23 September 2024 778 / 1476

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures, this will be done based on turnover. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

To comply with

Enabling activities directly

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³⁰?

Yes:

23 September 2024 779 / 1476

³⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund makes sustainable investments with environmental objectives that do not qualify as Taxonomy-aligned. Given the Sub-fund's investment strategy and the specific environmental investment objective, the Sub-fund commits to a minimum share of sustainable investments of 1% with an environmental objective. The environmental objectives of the Sub-fund are attained by investing in companies, in line with a low carbon scenario stipulated by the Paris-aligned benchmark methodology.

In addition, the Sub-fund intends to make sustainable investments off-benchmark, measured as positive scores via Robeco's SDG Framework. Among those could be sustainable investments with environmental objectives which are companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

The sum of sustainable investments with an environmental objective and socially sustainable investments will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Within the off-benchmark holdings (i.e. holdings that are not part of the Paris-Aligned Benchmark), the Sub-fund intends to make sustainable investments with a social objective. Given the Sub-fund's investment strategy and the specific social investment objective, the Sub-fund commits to a minimum

are
sustainable
investments with an

account the criteria

23 September 2024 780 / 1476

for environmentally sustainable economic activities under the EU Taxonomy. share of sustainable investments of 50% with a social objective, measured by off-benchmark holdings that have a positive score via Robeco's SDG Framework. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective. Not applicable.

23 September 2024 782 / 1476

cc) Robeco Emerging Markets SDG Engagement Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Emerging Markets Legal entity identifier: N/A SDG Engagement Equities

Environmental and/or social characteristics

boes this illiantial product have a sustainable investment objective:					
Yes	• No				
It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective				
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments				

23 September 2024 783 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- 1. The Sub-fund promotes investment in a portfolio that avoid significant harm, and aim to improve their contribution, to the Sustainable Development Goals (SDGs).
- The Sub-fund promotes driving a clear and measurable improvement in a company's contribution to the United Nations Sustainable Development Goals (SDGs) over three to five years by performing engagement.
- 3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 5. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The number of companies with a SDG score of -1, 0 (zero), +1 or +2 based on the internally developed SDG Framework.
- 2. The number of companies actively engaged.
- 3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 5. The number of holdings and agenda items voted.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 784 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 785 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	
~	103,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- o Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)

23 September 2024 786 / 1476

- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Emerging Markets SDG Engagement Equities is an actively managed fund that invests in a concentrated selection of emerging markets stocks. Stock selection is based on fundamental analysis to invest in companies that are best able to have a clear and measurable improvement in their contribution to the United Nations Sustainable Development Goals (UN SDGs) over three to five years via active engagement, as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund is solely invested in companies that hold a -1, 0 (zero) or positive SDG score. The Sub-fund excludes all high or medium negative SDG scores (-3 or -2) and all high positive SDG scores (+3) for selection of new investment cases based on the internally developed SDG Framework.
 - The Sub-fund only hold high positive SDG scores (+3) when a company receives an upgrade of their SDG score after successful SDG engagement that started with an initial -1, 0, +1 or +2 SDG score at investment. The Sub-fund can hold up to 20% of such holdings that are rated SDG (+3) after engagement has been successful for a period of 6 months.
 - (Successfully completed engagement: When a company progresses on the targets identified and fulfills the key performance indicators as established at the start of the engagement. Such targets can be linked with internal frameworks like the SDG framework).
- 2. The Sub-fund actively engages with 100% of the corporate holdings in the portfolio, typically for a period of 3 to 5 years. The engagement trajectories are assessed annually, considering the progress of pre-determined objectives that focus on contributing to specific sub targets of the SDGs. Once the company in scope falls out of the universe as a result of (a) a successful engagement (resulting in higher SDG scores) or (b) an unsuccessful engagement, then a selling strategy will be designed for divestment.
- 3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 787 / 1476

- Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 5. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 788 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 789 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?³¹

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 790 / 1476

S2978D-202409

³¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Yes	• No	
It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

23 September 2024 793 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- The Sub-fund promotes certain minimum environmental and social safeguards through applying
 exclusion criteria with regards to products and business practices that Robeco believes are
 detrimental to society and incompatible with sustainable investment strategies, such as exposure
 to controversial behavior, controversial weapons, and fossil fuels.
- 2. The Fund promotes certain minimum environmental and social safeguards through applying externally provided exclusion criteria.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 4. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 5. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The % of investments in countries and securities that are on an externally provided exclusion list.
- 3. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 4. The number of holdings and agenda items voted.
- 5. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 794 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 795 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an

and employee matters, respect for human rights, anticorruption and antibribery matters.

- ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Emerging Markets Asia Select Equities is an actively managed fund that invests in a concentrated selection of Asian emerging markets (ex China) stocks. Stock selection is based on fundamental analysis, as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the exclusions on the effects of the Sub-fund's universe can be https://www.robeco.com/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund's portfolio complies with the externally provided exclusion list. This means that the Sub-fund has 0% exposure to excluded countries and securities, taking into account a grace period.
- 3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 5. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 797 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

Asset allocation

Good governance

sound management

remuneration of staff and tax compliance.

practices include

relations,

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of
 investee

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

23 September 2024 798 / 1476

companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels

Does the financial product invest in fossil gas and/or nuclear energy related activitie
that comply with the EU Taxonomy? ³²

	Yes		
		In fossil gas	In nuclear energy
•	No		

23 September 2024 799 / 1476

S2978D-202409

³² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

23 September 2024 800 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ee) Robeco QI Emerging Markets Ex China Active Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Emerging Markets Legal entity identifier: N/A Ex China Active Equities

Environmental and/or social characteristics

boes this illiantial product have a sustainable investment objective:

It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments			

23 September 2024 802 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- The Sub-fund promotes certain minimum environmental and social safeguards through applying
 exclusion criteria with regards to products and business practices that Robeco believes are
 detrimental to society and incompatible with sustainable investment strategies, such as exposure
 to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
- 4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

23 September 2024 803 / 1476

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 804 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	
---	------	--

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)

impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Principal adverse

23 September 2024 805 / 1476

 In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco QI Emerging Markets Active Equities is an actively managed fund and invests in stocks of companies in emerging markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 3. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

23 September 2024 806 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Asset allocation describes the share of investments in specific assets.

Good governance

sound management

structures, employee

remuneration of staff and tax compliance.

practices include

relations,

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational

23 September 2024 807 / 1476

activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?³³

yes	

In fossil gas In nuclear energy

* No

To comply with the

EU Taxonomy, the

23 September 2024 808 / 1476

criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy,

³³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

23 September 2024 809 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

ff) Robeco QI Emerging Ex China Conservative Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Emerging Ex China Legal entity identifier: N/A Conservative Equities

Environmental and/or social characteristics

DUC	boes this initialitial product have a sustainable investment objective:				
•	Yes	• No			
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective			
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments			

23 September 2024 811 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market
- The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to

23 September 2024 812 / 1476

examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 813 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint
 until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 814 / 1476

 In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Emerging Conservative Equities is an actively managed fund that invests in low-volatility stocks in emerging countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 3. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 815 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

Asset allocation

Good governance

sound management

structures, employee

remuneration of staff and tax compliance.

practices include

relations,

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

23 September 2024 816 / 1476

activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels

that comply with the EU Taxonomy? ³⁴			
	Yes	5	
		In fossil gas	In nuclear energy
	₩ No		

23 September 2024 817 / 1476

³⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Transitional activities

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

23 September 2024 818 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

23 September 2024 819 / 1476

gg) Robeco QI Global Developed Active Small Cap Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Developed
Active Small Cap Equities

Legal entity identifier: TBD

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?			
•	Yes	• No	
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
	It will make a minimum of sustainable investments with a social objective: %	It promotes E/S characteristics, but will not make any sustainable investments	

23 September 2024 820 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through the reduction in carbon, water and waste footprints.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index
- 4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in

23 September 2024 821 / 1476

creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 822 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse

impacts of

impacts are the most significant negative

investment decisions

on sustainability

and employee

factors relating to environmental, social

matters, respect for human rights, anti-

corruption and anti-

bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)

23 September 2024 823 / 1476

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco QI Global Developed Active Small Cap Equities is an actively managed Sub-fund that invests in small and midsize companies in developed countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- The 2. Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of exclusions the Sub-fund's universe be found the on can https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the

eneral
INGPs,
es one
of the

23 September 2024 824 / 1476

- Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

sound management

structures, employee

remuneration of staff and tax compliance.

practices include

relations,

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

23 September 2024 825 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 826 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?³⁵

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

0%.

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

23 September 2024 827 / 1476

³⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Not applicable.

hh) Robeco Emerging Markets Climate Transition Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

23 September 2024 830 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- 1. The Sub-fund promotes Transition-related Investments contributing to the goals of the Paris Agreement.
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 4. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 5. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The proportion of Transition-related Investments contributing to the goals of the Paris Agreement.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 4. The number of holdings and agenda items voted.
- 5. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

23 September 2024 831 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 832 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

and employee

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)

23 September 2024 833 / 1476

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Emerging Markets Climate Transition Equities is an actively managed Sub-fund that invests in equities in emerging countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. At least 80% is invested in Transition-related Investments contributing to the goals of the Paris Agreement.
- The Sub-fund's Exclusion portfolio complies with Robeco's Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions the Sub-fund's universe https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 834 / 1476

policy.pdf.

- 5. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 5% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and Benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 835 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 836 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?³⁶

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%. The Sub-fund does not intend to make investments in transitional and enabling activities as defined under the EU Taxonomy. It cannot be excluded that among the Sub-fund's holdings certain investments, among which the investments in transition assets, are transitional or enabling activities as defined under the EU Taxonomy. The Sub-fund will report on these investments in the periodic disclosures.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%. While investments in transition assets may have an environmental objective, these are not per se sustainable investments.

23 September 2024 837 / 1476

S2978D-202409

³⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

23 September 2024 838 / 1476

2. REGIONAL & COUNTRY EQUITY SUB-FUNDS

Product name: Robeco Asia-Pacific Equities

a) Robeco Asia-Pacific Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 213800R6QI6SB393PI50

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics Does this financial product have a sustainable investment objective? Yes **≭** No It will make a minimum of It promotes Environmental/Social (E/S) sustainable investments with an **characteristics** and while it does not have as its objective a sustainable investment, it will environmental objective: ___% have a minimum proportion of 35% of in economic activities that sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in Taxonomy economic activities that qualify as in economic activities that do environmentally sustainable under the EU not qualify as environmentally Taxonomy sustainable under the EU with an environmental objective in Taxonomy economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective It will make a minimum of It promotes E/S characteristics, but will not sustainable investments with a make any sustainable investments social objective: ___%

23 September 2024 840 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 841 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 842 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

★ Yes,	
---------------	--

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

S2978D-202409

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Asia-Pacific Equities is an actively managed fund that invests in stocks in developed and emerging Asian-Pacific countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG

23 September 2024 844 / 1476

Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

O

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

practices include sound management structures, employee relations,

Good governance

remuneration of staff and tax compliance.

Asset allocation describes the

share of investments in specific assets.

23 September 2024 845 / 1476

 operational expenditure (OpEx) reflecting green operational activities of investee companies. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 846 / 1476

³⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Transitional activities

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

23 September 2024 847 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics

that they promote.

Not applicable.

23 September 2024 848 / 1476

b) Robeco Sustainable European Stars Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Legal entity identifier: 21380089E1HSI8JRUS47 European Stars Equities

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
•	Yes	• No
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

23 September 2024 849 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund promotes having a substantially lower carbon footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index").
- 5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 6. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
- 7. The Sub-fund applies negative screening.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 3. The number of holdings and agenda items voted.
- 4. The Sub-fund's weighted carbon footprint score compared to the General Market Index.
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 6. The % of holdings with an elevated sustainability risk profile.
- 7. The % of worst ESG performers excluded from the universe.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

23 September 2024 850 / 1476

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 851 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
 - Board gender diversity (PAI 13, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

factors relating to

23 September 2024 852 / 1476

- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Sustainable European Stars Equities is an actively managed fund that invests in equities of companies that are domiciled in Europe. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 2. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 4. The Sub-fund's weighted carbon footprint score is 20% better than that of the General Market Index.
- 5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 6. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 2% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 853 / 1476

differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

7. The Sub-fund excludes the bottom 20% ranked companies on ESG from the investment universe.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund, as part of the negative screening process, the Sub-fund commits to a minimum rate of 20% reduction, resulting to excluding the lowest performing companies based on ESG metrics. More information in relation to methodology and data used, can be found at https://www.robeco.com/docm/docu-robeco-sfdr-data-disclosures.pdf.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 854 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 855 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?³⁸

Yes
In fossil gas
In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 856 / 1476

S2978D-202409

³⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Does this financial product have a sustainable investment objective?

Environmental and/or social characteristics

•	Yes	• O 🗶 No
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

23 September 2024 859 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
- 4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in

23 September 2024 860 / 1476

creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 861 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse

and employee

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of
 this PAI is currently restricted to applying exclusions to palm oil producing companies and for
 any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation
 to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Indicators related

23 September 2024 862 / 1476

- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI European Conservative Equities is an actively managed fund that invests in low-volatility stocks in European countries. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

S2978D-202409

23 September 2024 863 / 1476

- The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docurobeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance reflected in the exclusion list that https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

- #1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- #2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

practices include sound management structures, employee relations,

remuneration of staff and tax compliance.

Good governance

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx)

23 September 2024 864 / 1476 reflecting green operational activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy,

Does the financial product invest in fossil gas and/or nuclear energy related
activities that comply with the EU Taxonomy? ³⁹
Voc

	Yes		
		In fossil gas	In nuclear energy
×	No		

23 September 2024 865 / 1476

³⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

23 September 2024 866 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

d) Robeco QI US Conservative Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI US Conservative Legal entity identifier: 549300LR60B223QXB617 Equities

23 September 2024 868 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index
- 4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in

23 September 2024 869 / 1476

creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 870 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

bribery matters.

and employee

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- o Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:

23 September 2024 871 / 1476

S2978D-202409

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco QI US Conservative Equities is an actively managed fund that invests in low-volatility stocks in North-American countries. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 3. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 872 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in

specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational

23 September 2024 873 / 1476

activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy,

Does the financial product invest in fossil gas and/or nuclear energy related
activities that comply with the EU Taxonomy? ⁴⁰

	Yes			
		In fossil gas	In nuclear energ	3
×	No			

23 September 2024 874 / 1476

⁴⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

23 September 2024 875 / 1476

socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Where can I find more product specific information online?

Equities

e) Robeco BP US Premium Equities

Product name: Robeco BP US Premium

It will make a minimum of

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 213800NHT998V29TM914

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics Does this financial product have a sustainable investment objective? Yes It will make a minimum of It promotes Environmental/Social (E/S) sustainable investments with an **characteristics** and while it does not have as environmental objective: ___% its objective a sustainable investment, it will have a minimum proportion of 40% of in economic activities that sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in Taxonomy economic activities that qualify as in economic activities that do environmentally sustainable under the EU not qualify as environmentally Taxonomy sustainable under the EU with an environmental objective in Taxonomy economic activities that do not qualify as environmentally sustainable under the EU

It promotes E/S characteristics, but will not

23 September 2024 877 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
- 5. The Sub-fund promotes having a lower carbon footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index").

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The % of holdings with an elevated sustainability risk profile.
- 5. The weighted carbon footprint score of the Sub-fund compared to the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

23 September 2024 878 / 1476

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 879 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

•	VAC		
	Yes,		

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 880 / 1476

 In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco BP US Premium Equities is an actively managed fund that invests in stocks in the United States. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- 5. The Sub-fund's weighted carbon footprint score is better than that of the General Market Index.

23 September 2024 881 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Asset allocation describes the share of investments in specific assets.

activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy,

⁴¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

0%

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

23 September 2024 884 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

f) Robeco Chinese Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Chinese Equities Legal entity identifier: 213800TJUGS6VH4REL60

23 September 2024 886 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 887 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 888 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

and employee

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

23 September 2024 889 / 1476

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Chinese Equities is an actively managed fund that invests in listed stocks of leading Chinese companies. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <a href="https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-robeco.com/files/docm/docu-robeco-sustainability-risk-robeco.com/files/docm/docu-robeco-sustainability-risk-robeco.com/files/docm/docu-robeco-sustainability-risk-robeco.com/files/docm/docu-robeco-sustainability-risk-robeco.com/files/docm/docu-robeco-sustainability-risk-robeco.com/files/docm/docu-robeco-sustainability-risk-robeco.com/files/docm/docu-robeco-sustainability-risk-robeco.com/files/docm/docu-robeco-sustainability-risk-robeco.com/files/docm/docu-robeco-sustainability-risk-robeco.com/files/docm/docu-robeco-sustainability-risk-robeco.com/files/docm/docu-robeco-sustainability-risk-robeco.com/files/docm/docu-robeco-sustainability-risk-robeco.com/files/docm/docu-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability-risk-robeco-sustainability

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 890 / 1476

<u>policy.pdf</u>). The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

sound management structures, employee relations, remuneration of staff and tax compliance.

Good governance

practices include

Asset allocation describes the share of investments in

specific assets.

23 September 2024 891 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

O%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same

23 September 2024 892 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁴²

Yes

In fossil gas

In nuclear energy

★ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?
 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 893 / 1476

S2978D-202409

⁴² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 897 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 898 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

and employee

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,		

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

23 September 2024 899 / 1476

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Indian Equities is an actively managed fund that invests in stocks listed on the major Indian stock exchanges. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which

23 September 2024 900 / 1476

can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the

share of investments in specific assets.

23 September 2024 901 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 902 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁴³

Yes

In fossil gas In nuclear energy

* No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 903 / 1476

S2978D-202409

⁴³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

h) Robeco Asian Stars Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

23 September 2024 906 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 907 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 908 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

and employee

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of
 this PAI is currently restricted to applying exclusions to palm oil producing companies and for
 any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation
 to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

23 September 2024 909 / 1476

- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Asian Stars Equities is an actively managed fund that invests in stocks of the most attractive companies in Asia. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 910 / 1476

sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 911 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 912 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁴⁴

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 913 / 1476

S2978D-202409

⁴⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

i) Robeco Sustainable Asian Stars Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Asian Legal entity identifier: 213800C3QE3BF5TD6K08 Stars Equities

Environmental and/or social characteristics

Doe	Does this financial product have a sustainable investment objective?		
••	Yes	● ○ 🗶 No	
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	the promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

23 September 2024 916 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- The Sub-fund promotes certain minimum environmental and social safeguards through applying
 exclusion criteria with regards to products and business practices that Robeco believes are
 detrimental to society and incompatible with sustainable investment strategies, such as exposure
 to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund promotes having a substantially lower carbon footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index").
- 5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 6. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 3. The number of holdings and agenda items voted.
- 4. The Sub-fund's weighted carbon footprint score compared to the General Market Index.
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 6. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

23 September 2024 917 / 1476

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 918 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

factors relating to

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
 - Board gender diversity (PAI 13, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:

23 September 2024 919 / 1476

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Sustainable Asian Stars Equities is an actively managed fund that invests in stocks of the most attractive companies in Asia. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 4. The Sub-fund's weighted carbon footprint score is 20% better than that of the General Market Index.
- The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 6. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 5% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 920 / 1476

separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational

23 September 2024 921 / 1476

activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste

In fossil gas

In nuclear energy

23 September 2024 922 / 1476

S2978D-202409

⁴⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

×

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of

23 September 2024 923 / 1476

socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Not applicable.

Where can I find more product specific information online?

23 September 2024 924 / 1476

j) Robeco BP US Large Cap Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco BP US Large Cap

Legal entity identifier: 213800JOQ7MWBS9GH642

23 September 2024 925 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
- 5. The Sub-fund promotes having a lower carbon footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index").

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The % of holdings with an elevated sustainability risk profile.
- 5. The weighted carbon footprint score of the Sub-fund compared to the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 926 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 927 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 928 / 1476

 In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco BP US Large Cap Equities is an actively managed fund that invests in large-cap stocks in the United States. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- 5. The Sub-fund's weighted carbon footprint score is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 929 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Asset allocation describes the share of investments in

specific assets.

- operational expenditure (OpEx) reflecting green operational

23 September 2024 930 / 1476

activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy,

Does the financial product invest in fossil gas and/or nuclear energy rela	ated
activities that comply with the EU Taxonomy? ⁴⁶	

	Yes		
		In fossil gas	In nuclear energy
×	No		

23 September 2024 931 / 1476

S2978D-202409

⁴⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

23 September 2024 932 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- The Sub-fund promotes certain minimum environmental and social safeguards through applying
 exclusion criteria with regards to products and business practices that Robeco believes are
 detrimental to society and incompatible with sustainable investment strategies, such as exposure
 to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
- 5. The Sub-fund promotes having a lower carbon footprint than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The % of holdings with an elevated sustainability risk profile.
- 5. The weighted carbon footprint score of the Sub-fund compared to the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 935 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 936 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of
 this PAI is currently restricted to applying exclusions to palm oil producing companies and for
 any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation
 to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- o Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 937 / 1476

 In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco BP US Select Opportunities Equities is an actively managed fund that invests in mid-cap stocks in the United States. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- 5. The Sub-fund's weighted carbon footprint is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

S2978D-202409

23 September 2024 938 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

Good governance

practices include

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure
 (CapEx) showing
 the green
 investments made
 by investee
 companies, e.g. for
 a transition to a
 green economy.
- operational expenditure (OpEx) reflecting green operational

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

23 September 2024 939 / 1476

activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels

Does the financial product invest in fossil gas and/or nuclear energy relate
activities that comply with the EU Taxonomy? ⁴⁷

	Yes		
		In fossil gas	In nuclear energy
×	No		

23 September 2024 940 / 1476

⁴⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

23 September 2024 941 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

23 September 2024 942 / 1476

I) Robeco Chinese A-share Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Chinese A-share Legal entity identifier: 213800GE9C6GVRJ3AM62 Equities

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?				
••	Yes	● No		
	in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	 It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective 		
	It will make a minimum of sustainable investments with a social objective: %	It promotes E/S characteristics, but will not make any sustainable investments		

23 September 2024 943 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
- 5. The Sub-fund promotes having a lower carbon footprint than that of the general market index referred to in Appendix VI Benchmarks (the "General Market Index").

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The % of holdings with an elevated sustainability risk profile.
- 5. The Sub-fund promotes having a lower carbon footprint than the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 944 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 945 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse

bribery matters.

and employee

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	
---	------	--

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)

23 September 2024 946 / 1476

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Chinese A-share Equities is an actively managed fund that invests in Chinese A-shares. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final guestion of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.

23 September 2024 947 / 1476

- 4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 25% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- 5. The Sub-fund's weighted carbon footprint score is 20% better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in

specific assets.

23 September 2024 948 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 949 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?
 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 950 / 1476

S2978D-202409

⁴⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

m) Robeco QI Chinese A-share Active Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Chinese A-share Legal entity identifier: 2138000ARI6HPJH22T56
Active Equities

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?					
Yes	• No				
It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective				
It will make a minimum of sustainable investments with a social objective: %	It promotes E/S characteristics, but will not make any sustainable investments				

23 September 2024 953 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market
- The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to

23 September 2024 954 / 1476

examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 955 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:

23 September 2024 956 / 1476

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Chinese A-share Active Equities is an actively managed fund that invests in stocks of companies with an A-share listing in mainland China. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 3. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 957 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- $\hbox{- The sub-category \#1A Sustainable covers sustainable investments with environmental or social objectives.}\\$
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational

23 September 2024 958 / 1476

activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the Does the financial product invest in fossil gas and/or nuclear energy related EU Taxonomy, the activities that comply with the EU Taxonomy?⁴⁹ criteria for fossil gas include Yes limitations on emissions and In fossil gas switching to renewable power No or low-carbon fuels

23 September 2024 959 / 1476

by the end of 2035. For nuclear energy,

In nuclear energy

⁴⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

23 September 2024 960 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
- 3. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 4. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

23 September 2024 963 / 1476

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 964 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:

23 September 2024 965 / 1476

S2978D-202409

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Chinese A-share Conservative Equities is an actively managed fund that invests in low-volatility stocks of companies with an A-share listing in mainland China. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 2. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

> 966 / 1476 82978D-202409

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

Asset allocation

Good governance

practices include

relations,

sound management

structures, employee

remuneration of staff and tax compliance.

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

23 September 2024 967 / 1476

activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels

Does the financial product invest in fossil gas and/or nuclear energy related
activities that comply with the EU Taxonomy? ⁵⁰

	Yes		
		In fossil gas	In nuclear energy
×	No		

23 September 2024 968 / 1476

⁵⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

23 September 2024 969 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

23 September 2024 970 / 1476

Equities

o) Robeco QI European Value Equities

Product name: Robeco QI European Value

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 213800SX488DS47PZG42

It promotes E/S characteristics, but will not

make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics Does this financial product have a sustainable investment objective? Yes **≭** No It will make a minimum of It promotes Environmental/Social (E/S) sustainable investments with an characteristics and while it does not have as environmental objective: ___% its objective a sustainable investment, it will have a minimum proportion of 50% of in economic activities that sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in Taxonomy economic activities that qualify as in economic activities that do environmentally sustainable under the EU not qualify as environmentally Taxonomy sustainable under the EU with an environmental objective in Taxonomy economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

It will make a minimum of

social objective: ___%

sustainable investments with a

- 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.

23 September 2024 971 / 1476

- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index
- 3. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 4. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

23 September 2024 972 / 1476

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

23 September 2024 973 / 1476

Principal adverse

impacts of

impacts are the most significant negative

investment decisions

on sustainability

and employee

factors relating to environmental, social

matters, respect for human rights, anti-

corruption and anti-

bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

23 September 2024 974 / 1476

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco QI European Value Equities is an actively managed fund that invests in stocks in European countries. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 2. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

23 September 2024 975 / 1476

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a

23 September 2024 976 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁵¹

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's

23 September 2024 977 / 1476

S2978D-202409

⁵¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics

that they promote.

Not applicable.

23 September 2024 978 / 1476

23 September 2024 979 / 1476

p) Robeco QI US Climate Beta Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

practices.

The **EU Taxonomy**

is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental

objective might be aligned with the Taxonomy or not.

Sustainability

indicators measure

how the sustainable objectives of this

Product name: Robeco QI US Climate Beta Legal entity identifier: 2138002ROX4K9YH3D187 Equities

Sustainable investment objective

Does this financial product have a sustainable investment objective?				
•• × Yes	• No			
It will make a minimum of sustainable investments with an environmental objective: 50% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective			
It will make a minimum of sustainable investments with a social objective: 10%	It promotes E/S characteristics, but will not make any sustainable investments			

What is the sustainable investment objective of this financial product?

The sustainable investments of the Sub-fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris Agreement to keep the maximum global temperature rise well-below 2°C.

23 September 2024 980 / 1476

financial product are attained.

The Sub-fund has a carbon-reduction objective and uses the MSCI USA EU PAB Overlay Index to monitor the carbon profile of the Sub-fund. The sustainable investments contribute partly to the environmental objective of Climate Mitigation under the Taxonomy regulation.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of holdings and agenda items voted.
- 2. The Sub-fund's weighted carbon footprint score compared to the Paris-Aligned Benchmark.
- 3. The Sub-fund's weighted water and waste footprint score compared to the general market index referred to in Appendix VI Benchmarks (the "General Market Index").
- 4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of the Robeco's Exclusion Policy.
- 5. The number of holdings that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises.
- 6. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 7. The proportion of companies that hold a negative SDG score (-3, -2 or -1) based on the internally developed SDG Framework.
- 8. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris-Aligned Benchmark follow eligibility requirements as per Article 12 of the EU regulation EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

All sustainable investments are constituents of Paris-Aligned Benchmark, or follow the benchmark methodology. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1. PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis.

A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

23 September 2024 981 / 1476

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as the methodology of the benchmark provider.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration
 of this PAI is currently restricted to applying exclusions to palm oil producing companies and
 for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in
 relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1), via the Paris-Aligned Benchmark
 - Water and waste indicators (PAI 8-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration
 of this PAI is currently restricted to applying exclusions to palm oil producing companies and

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 982 / 1476

for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

 In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco QI US Climate Beta Equities is an actively managed fund that invests in equities of companies in the Unites States of America. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

Beta stands for the investment management approach of the Sub-fund that follows the sole purpose of pursuing the sustainable investment objective of the Sub-fund. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- All equity holdings have a granted right to vote and Robeco exerts that right by voting according
 to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not
 considered cost efficient). Robeco's Proxy Voting Policy can be found at
 https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf
- 2. The Sub-fund's weighted carbon footprint score is better than that of the Paris-Aligned Benchmark.
- 3. The Sub-fund's weighted water and waste footprint score is at least 20% better than that of the General Market Index.
- 4. The Sub-fund fully complies with activity based exclusions with regards to products (including controversial weapons, tobacco, palm oil, and thermal coal, upstream oil and gas and electricity producers in line with Article 12 of the EU regulation Climate Transition Benchmarks, EU Parisaligned Benchmarks and sustainability-related disclosures for benchmarks) as applicable. In addition. portfolio the Sub-fund's complies with Robeco's Exclusion (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 5. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 983 / 1476

- 6. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index
- 7. The Sub-fund excludes all negative SDG scores (-3, -2 or -1).
- 3. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is at least 20% better than that of the General Market Index, measured as a ratio.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, measured by the by holdings that are part of the Paris-Aligned Benchmark or follow the methodology of the Paris-Aligned Benchmark. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax

compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- reflecting the share of revenue from green activities of investee companies
- capital
 expenditure
 (CapEx) showing
 the green
 investments
 made by investee
 companies, e.g.
 for a transition to
 a green economy.
- operational
 expenditure
 (OpEx) reflecting
 green operational
 activities of

23 September 2024 984 / 1476

investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the climate change mitigation objective under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. Given the current commitment, the expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁵²?

In fossil gas In nuclear energy

★ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

To comply with

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which

23 September 2024 985 / 1476

S2978D-202409

the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

⁵² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

low-carbon
alternatives are not
yet available and
among others have
greenhouse gas
emission levels
corresponding to
the best
performance.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund makes sustainable investments with environmental objectives that do not qualify as Taxonomy-aligned. Given the Sub-fund's investment strategy and the specific environmental investment objective, the Sub-fund commits to a minimum share of sustainable investments of 50% with an environmental objective. The environmental objectives of the Sub-fund are attained by investing in companies, in line with a low carbon scenario stipulated by the Paris-aligned benchmark methodology.

In addition, the Sub-fund intends to make sustainable investments off-benchmark, measured as positive scores via Robeco's SDG Framework. Among those could be sustainable investments with environmental objectives which are companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

The sum of sustainable investments with an environmental objective and socially sustainable investments will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

sustainable

environmental

not take into

sustainable

under the EU

Taxonomy.

objective that **do**

account the criteria

for environmentally

economic activities

investments with an

What is the minimum share of sustainable investments with a social objective?

Within the off-benchmark holdings (i.e. holdings that are not part of the Paris-Aligned Benchmark), the Sub-fund intends to make sustainable investments with a social objective. Given the Sub-fund's investment strategy and the specific social investment objective, the Sub-fund commits to a minimum share of sustainable investments of 10% with a social objective, measured by off-benchmark holdings that have a positive score via Robeco's SDG Framework. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment

23 September 2024 986 / 1476

restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Reference benchmarks are indexes to measure whether the financial product attains the

investment objective.

sustainable

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Yes, the Sub-fund uses the MSCI USA EU PAB Overlay Index as a reference index to meet the carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The MSCI EU PAB Overlay Indices are constructed from their corresponding Parent Indexes using an optimization-based approach and aim to:

- Reduce the weighted average greenhouse gas intensity by 50% compared to the underlying investment universe.
- Reduce the weighted average greenhouse gas (GHG) intensity by 7% on an annualized basis.
- Achieve a modest tracking error compared to the Parent Index and low turnover.
- Exclude companies based on the following criteria: Companies involved in Controversial Weapons businesses, Very Severe ESG Controversies, Severe Environmental Controversies, Tobacco Manufacturing, Thermal Coal, Oil & Gas and Fossil Fuel-based power generation.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The methodology of the reference index follows rebalancing rules which ensures alignment with the investment strategy and objective of the Sub-fund.

The index uses data such as MSCI Climate Change Metrics, MSCI Climate Value-at-Risk, MSCI ESG Sustainable Impact Metrics, MSCI ESG Controversies and MSCI Business Involvement Screening Research) as of the end of the month, preceding the Index Reviews, for the rebalancing of the index.

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

How does the designated index differ from a relevant broad market index?

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and carbon footprint of companies.

Where can the methodology used for the calculation of the designated index be found?

The index methodology can be found on the relevant webpages by the index provider: https://www.msci.com

23 September 2024 987 / 1476

q) Robeco QI European Active Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI European Active Legal entity identifier: 213800SATZYOKMAPLJ87 **Equities**

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?				
••	Yes	• No		
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective		
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments		

23 September 2024 989 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index
- 3. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 4. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

23 September 2024 990 / 1476

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 991 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

*	Yes,		
	ı Co,		

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 992 / 1476

 In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI European Active Equities is an actively managed fund that invests in stocks of companies in Europe. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
- 3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

23 September 2024 993 / 1476

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

0

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure
 (CapEx) showing
 the green
 investments made
 by investee
 companies, e.g. for
 a transition to a
 green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the

23 September 2024 994 / 1476

intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁵³

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

S2978D-202409

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Sustainability indicators measure

environmental or

promoted by the

social characteristics

financial product are

how the

attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- 1. The Sub-fund promotes Transition-related Investments contributing to the goals of the Paris Agreement.
- 2. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals (SDGs).
- 3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 5. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 6. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference Benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The proportion of Transition-related Investments contributing to the goals of the Paris Agreement.
- 2. The proportion of companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
- 3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 5. The number of holdings and agenda items voted.
- 6. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

23 September 2024 999 / 1476

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1000 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

and employee

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)

23 September 2024 1001 / 1476

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Transition Asian Equities is an actively managed Sub-fund that invests in equities in Asia. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- At least 50% is invested in Transition-related Investments contributing to the goals of the Paris Agreement.
- 2. Other equity holdings (i.e., next to the Transition-related Investments) are invested in companies with a positive or neutral SDG score.
- Sub-fund's portfolio 3. complies with Robeco's Exclusion (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions the Sub-fund's universe be found on https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 5. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking). Robeco's Proxy

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

S2978D-202409

23 September 2024 1002 / 1476

- Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 6. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 5% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and Benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 1003 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1004 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁵⁴

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%. The Sub-fund does not intend to make investments in transitional and enabling activities as defined under the EU Taxonomy. It cannot be excluded that among the Sub-fund's holdings certain investments, among which the investments in transition assets, are transitional or enabling activities as defined under the EU Taxonomy. The Sub-fund will report on these investments in the periodic disclosures.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%. While investments in transition assets may have an environmental objective, these are not per se sustainable investments.

23 September 2024 1005 / 1476

S2978D-202409

⁵⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

3. THEME EQUITY SUB-FUNDS

a) Robeco New World Financials

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco New World Legal entity identifier: 213800WE9J70V8D0ET07 Financials

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	 ★ It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments ✓ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ★ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ★ with a social objective 			
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments			

23 September 2024 1008 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
- 5. The Sub-fund promotes having a lower carbon footprint than that of the general market index referred to in Appendix VI Benchmarks (the "General Market Index").

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The % of holdings with an elevated sustainability risk profile.
- The Sub-fund promotes having a lower carbon footprint than the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 1009 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1010 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

factors relating to

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:

23 September 2024 1011 / 1476

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco New World Financials is an actively managed fund that invests in equities from developed and emerging countries all over the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 1012 / 1476

- differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- 5. The Sub-fund's weighted carbon footprint score is 20% better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund, as part of the negative screening process, commits to a minimum rate of 10% reduction, resulting to excluding the lowest performing companies based on ESG metrics. More information in relation to methodology and data used, can be found at https://www.robeco.com/docm/docu-robecosfdr-data-disclosures.pdf.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in

specific assets.

23 September 2024 1013 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1014 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁵⁵

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 1015 / 1476

S2978D-202409

⁵⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

b) Robeco Sustainable Property Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Property Legal entity identifier: 2138003BSHS5NJ9EBX10 **Equities**

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

•	Yes	• No
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

23 September 2024 1018 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund promotes having a substantially lower carbon footprint than the general market index referred to in Appendix VI Benchmarks (the "General Market Index").
- 5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 6. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 3. The number of holdings and agenda items voted.
- 4. The Sub-fund's weighted carbon footprint score compared to the General Market Index.
- 5. The Sub-fund's weighted average ESG score compared to the General Market Index.
- 6. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

23 September 2024 1019 / 1476

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1020 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
 - Board gender diversity (PAI 13, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)

significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Principal adverse

impacts are the most

23 September 2024 1021 / 1476

 In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Sustainable Property Equities is an actively managed fund that invests in stocks in developed countries across the world. The selection of these stocks is based on fundamental analysis. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 4. The Sub-fund's weighted carbon footprint score is 20% better than that of the General Market Index.
- 5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 6. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 2% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

23 September 2024 1022 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1A Sustainable #1Aligned with E/S characteristics 90% #1B Other E/S characteristics <40% #2 Other 0-10%

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Asset allocation describes the share of investments in specific assets.

Good governance

criteria for fossil gas include

limitations on emissions and

switching to renewable power

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

In nuclear energy

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁵⁶ Yes

k No

In fossil gas

23 September 2024 1024 / 1476

⁵⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

> 23 September 2024 1025 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Not applicable.

	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

23 September 2024 1027 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
- 5. The Sub-fund promotes having a lower carbon footprint than that of the general market index referred to in Appendix VI Benchmarks (the "General Market Index").

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The % of holdings with an elevated sustainability risk profile.
- 5. The Sub-fund promotes having a lower carbon footprint than the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

23 September 2024 1028 / 1476

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1029 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

23 September 2024 1030 / 1476

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Global Consumer Trends is an actively managed fund that invests in stocks in developed and emerging countries across the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

S2978D-202409

23 September 2024 1031 / 1476

<u>policy.pdf</u>). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

- 5. The Sub-fund's weighted carbon footprint score is 20% better than that of the General Market Index.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-qovernance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation

describes the share of investments in specific assets.

23 September 2024 1032 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1033 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁵⁷

Yes
In fossil gas
In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 1034 / 1476

S2978D-202409

⁵⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Not applicable.

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 2138006ECAW1JTNY4V89

It promotes E/S characteristics, but will not

make any sustainable investments

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Yes **≭** No It will make a minimum of It promotes Environmental/Social (E/S) sustainable investments with an characteristics and while it does not have as environmental objective: ___% its objective a sustainable investment, it will have a minimum proportion of 35% of in economic activities that sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in Taxonomy economic activities that qualify as in economic activities that do environmentally sustainable under the EU not qualify as environmentally Taxonomy sustainable under the EU with an environmental objective in Taxonomy economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective

23 September 2024 1037 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 1038 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1039 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

	\/	
*	Yes,	
•		

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Principal adverse

impacts of

impacts are the most significant negative

investment decisions on sustainability

23 September 2024 1040 / 1476

- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Global Multi-Thematic is an actively managed fund that invests worldwide in equities from developed and emerging countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 1041 / 1476

<u>policy.pdf</u>). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 1042 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1043 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁵⁸

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 1044 / 1476

⁵⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Where can I find more product specific information online?

e) Robeco Digital Innovations

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Digital Innovations Legal entity identifier: 213800WH91CRLWH4AL56

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	● ○ ≭ No	
It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	 It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective 	
It will make a minimum of sustainable investments with a social objective: %	It promotes E/S characteristics, but will not make any sustainable investments	

23 September 2024 1047 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 1048 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1049 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

and employee matters, respect for

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:

23 September 2024 1050 / 1476

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Digital Innovations is an actively managed fund that invests worldwide in equities from developed and emerging countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 1051 / 1476

differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure
 (CapEx) showing
 the green
 investments made
 by investee
 companies, e.g. for
 a transition to a
 green economy.
- operational expenditure (OpEx) reflecting green operational

activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels

Does the financial product invest in fossil gas and/or nuclear energy related
activities that comply with the EU Taxonomy? ⁵⁹

Yes		
	In fossil gas	In nuclear energy
No		

23 September 2024 1053 / 1476

⁵⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

23 September 2024 1054 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Not applicable.

f) Robeco FinTech

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 213800XVWPYZAY58YG68

with a social objective

make any sustainable investments

It promotes E/S characteristics, but will not

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics Does this financial product have a sustainable investment objective? Yes × No It will make a minimum of It promotes Environmental/Social (E/S) sustainable investments with an characteristics and while it does not have as its objective a sustainable investment, it will environmental objective: ___% have a minimum proportion of 35% of in economic activities that sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in Taxonomy economic activities that qualify as in economic activities that do environmentally sustainable under the EU not qualify as environmentally Taxonomy sustainable under the EU with an environmental objective in Taxonomy economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

23 September 2024 1056 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 1057 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1058 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Principal adverse

impacts are the most

23 September 2024 1059 / 1476

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco FinTech is an actively managed fund that invests in stocks in developed and emerging countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 1060 / 1476

<u>policy.pdf</u>). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment, compliance and risk management that oversees the bottom-up sustainability analysis.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 1061 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1062 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁶⁰

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?
 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 1063 / 1476

S2978D-202409

⁶⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

g) Robeco Circular Economy

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

Product name: Robeco Circular Economy Legal entity identifier: 21380076KKDPDXSFG955

Sustainable investment objective

Does this financial product have a sustainable investment objective?		
•	× Yes	• No
×	It will make a minimum of sustainable investments with an environmental objective: 5% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
×	It will make a minimum of sustainable investments with a social objective: 45%	It promotes E/S characteristics, but will not make any sustainable investments

23 September 2024 1066 / 1476

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund has the following sustainable investment objective: to finance solutions that support the transition from traditional production and consumption patterns toward a circular economy. The sustainable investment objective is attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): Zero Hunger (SDG 2), Good health and well-being (SDG 3), Decent work and economic growth (SDG 8), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11) and Responsible consumption and production (SDG 12). The Sub-fund does not have a carbon-reduction objective and the reference benchmark has not been designated for the purpose of attaining the sustainable investment objective.

A part of the investments made by the Sub-fund contribute to the following environmental objectives of the EU Taxonomy regulation:

- Protection and restoration of biodiversity and ecosystems
- Sustainable use and protection of water and marine resources
- Substantial contribution to the transition to a circular economy

There is no reference benchmark designated for the sustainable investment objective promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies with transitioning activities or companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 4. The number of holdings and agenda items voted.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-

23 September 2024 1067 / 1476

adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

23 September 2024 1068 / 1476

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for

human rights, anti-

corruption and anti-

bribery matters.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Circular Economy is an actively managed fund that invests globally in companies aligned with circular economy principles. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- 1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets can consist of neutral SDG scores.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

23 September 2024 1069 / 1476

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- reflecting the share of revenue from green activities of investee companies
- capital
 expenditure
 (CapEx) showing
 the green
 investments
 made by investee
 companies, e.g.
 for a transition to
 a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 5% sustainable investments with an environmental objective and a minimum portion of 45% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

23 September 2024 1070 / 1476

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the following environmental objectives the EU Taxonomy Regulation:

- Protection and restoration of biodiversity and ecosystems
- Sustainable use and protection of water and marine resources
- Substantial contribution to the transition to a circular economy

The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon

Does the financial product invest in fossil gas and/or nuclear en	nergy related
activities that comply with the EU Taxonomy ⁶¹ ?

Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commits to a minimum share of sustainable investments of 5% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 90% sustainable investments,.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 45% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

23 September 2024 1072 / 1476

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective. Not applicable.

h) Robeco Smart Energy

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

Product name: Robeco Smart Energy Legal entity identifier: 213800XOKIZRP1SLWA28

Sustainable investment objective

Does this infancial product have a sustainable investment objective:		
•	× Yes	• No
×	It will make a minimum of sustainable investments with an environmental objective: 15% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
×	It will make a minimum of sustainable investments with a social objective: 35%	It promotes E/S characteristics, but will not make any sustainable investments

23 September 2024 1074 / 1476

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The sustainable investments of the Sub-fund aim to further the transformation and decarbonization of the global energy sector. The sustainable investment objective is attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): Affordable and clean energy goal (SDG 7), Decent work and economic growth (SDG 8), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11) and Climate action (SDG 13).

A part of the investments made by the Sub-fund contribute to the environmental objective of Climate Mitigation under the Taxonomy regulation. The Sub-fund has a carbon-reduction objective and uses the Custom Bloomberg Climate Transition Benchmark to monitor the carbon profile of the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The Sub-fund's weighted carbon footprint compared to the Custom Bloomberg Climate Transition Benchmark.
- 2. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies with transitioning activities or companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
- 3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 5. The number of holdings and agenda items voted.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

23 September 2024 1075 / 1476

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Ty.

Principal adverse

negative impacts of

factors relating to

social and employee matters, respect for

human rights, anti-

corruption and antibribery matters.

environmental,

impacts are the most significant

investment

decisions on sustainability

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Smart Energy is an actively managed fund that invests globally in companies providing technologies for clean energy production, distribution, power management infrastructure and energy

23 September 2024 1076 / 1476

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance. efficiency. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's weighted carbon footprint score is equal or better than that of the Custom Bloomberg Climate Transition Benchmark.
- 2. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets can consist of neutral SDG scores.
- 3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 5. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 15% sustainable investments with an environmental objective and a minimum portion of 35% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

- operational expenditure (OpEx) reflecting green operational activities of investee companies

10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the environmental objective of Climate Mitigation under the EU Taxonomy.

The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1078 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling
activities directly
enable other
activities to make
a substantial
contribution to an
environmental
objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁶²?

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commits to a minimum share of sustainable investments of 15% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

23 September 2024 1079 / 1476

S2978D-202409

⁶² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 35% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

benchmarks are indexes to measure whether the financial product attains the sustainable

investment objective.

Reference

The Sub-fund uses the Custom Bloomberg Climate Transition Benchmark to meet the carbon objective of the Sub-fund.

The reference benchmark is designed in accordance with the requirements of point (d) of Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817. The Sub-fund's exclusion criteria are similar to those of the reference index, and the Sub-fund's weighted carbon footprint score is equal to or better than the reference benchmark for the carbon objective of the Sub-fund.

23 September 2024 1080 / 1476

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. Bloomberg applies Robeco defined criteria on a regular basis to exclude companies which do not comply with the thematic objective of the Sub-fund. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

How does the designated index differ from a relevant broad market index?

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and carbon footprint of companies. In addition, the designated index is tailored towards the sector-specific focus of the Sub-fund.

Where can the methodology used for the calculation of the designated index be found?

The index methodology can be found at https://assets.bbhub.io/professional/sites/10/Bloomberg-Global-Equity-Paris-Aligned-Climate-Transition-Methodology.pdf.

23 September 2024 1081 / 1476

Product name: Robeco Smart Materials

Robeco Smart Materials

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

Legal entity identifier: 213800HUVXY434VECO29

Sustainable investment objective

Does this financial product have a sustainable investment objective?						
•	× Yes	• No				
×	It will make a minimum of sustainable investments with an environmental objective: 15% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective				
×	It will make a minimum of sustainable investments with a social objective: 35%	It promotes E/S characteristics, but will not make any sustainable investments				

23 September 2024 1082 / 1476

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The sustainable investments of the Sub-fund aim to help mitigate the resource scarcity challenge within industries while supporting economic growth. The sustainable investment objective is attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): Decent work and economic growth (SDG 8), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11), and Responsible consumption and production (SDG 12) as well as Climate action (SDG 13).

A part of the investments made by the Sub-fund contribute to the environmental objective of Climate Mitigation under the Taxonomy regulation. The Sub-fund has a carbon-reduction objective and uses the Custom Bloomberg Climate Transition Benchmark to monitor the carbon profile of the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The Sub-fund's weighted carbon footprint compared to the Custom Bloomberg Climate Transition Benchmark.
- 2. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies with transitioning activities or companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
- 3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 5. The number of holdings and agenda items voted.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

investment

decisions on sustainability

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Smart Materials is an actively managed fund that invests globally in companies that provide innovative materials and process technologies. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The

23 September 2024 1084 / 1476

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance. strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's weighted carbon footprint score is equal or better than that of the Custom Bloomberg Climate Transition Benchmark.
- 2. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets can consist of neutral SDG scores.
- 3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 5. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 15% sustainable investments with an environmental objective and a minimum portion of 35% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 1085 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- expenditure
 (CapEx) showing
 the green
 investments
 made by investee
 companies, e.g.
 for a transition to
 a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies

10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the environmental objective of Climate Mitigation under the EU Taxonomy.

The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1086 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling
activities directly
enable other
activities to make
a substantial
contribution to an
environmental
objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁶³?

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commits to a minimum share of sustainable investments of 15% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

23 September 2024 1087 / 1476

S2978D-202409

⁶³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 35% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

The Sub-fund uses the Custom Bloomberg Climate Transition Benchmark to meet the carbon objective of the Sub-fund.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The reference benchmark is designed in accordance with the requirements of point (d) of Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817.

The Sub-fund's exclusion criteria are similar to those of the reference index, and the Sub-fund's weighted carbon footprint score is equal to or better than the reference benchmark for the carbon objective of the Sub-fund.

23 September 2024 1088 / 1476

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. Bloomberg applies Robeco defined criteria on a regular basis to exclude companies which do not comply with the thematic objective of the Sub-fund. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

How does the designated index differ from a relevant broad market index?

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and carbon footprint of companies. In addition, the designated index is tailored towards the sector-specific focus of the Sub-fund.

Where can the methodology used for the calculation of the designated index be found?

The index methodology can be found at https://assets.bbhub.io/professional/sites/10/Bloomberg-Global-Equity-Paris-Aligned-Climate-Transition-Methodology.pdf.

Product name: Robeco Smart Mobility

j) Robeco Smart Mobility

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

Sustainable investment objective

Legal entity identifier: 21380025AXSQN7Y4RV82

Does this financial product have a sustainable investment objective?					
••	× Yes	• No			
*	It will make a minimum of sustainable investments with an environmental objective: 15% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective			
×	It will make a minimum of sustainable investments with a social objective: 35%	It promotes E/S characteristics, but will not make any sustainable investments			

23 September 2024 1090 / 1476

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

What is the sustainable investment objective of this financial product?

The sustainable investments of the Sub-fund aim to support the transformation and decarbonization of the global transportation sector. The sustainable investment objective is attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): Affordable and clean energy goal (SDG 7), Decent work and economic growth (SDG 8), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11) and Climate action (SDG 13).

A part of the investments made by the Sub-fund contribute to the environmental objective of Climate Mitigation under the Taxonomy regulation. The Sub-fund has a carbon-reduction objective and uses the Custom Bloomberg Climate Transition Benchmark to monitor the carbon profile of the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- The Sub-fund's weighted carbon footprint compared to the Custom Bloomberg Climate Transition Benchmark.
- 2. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies with transitioning activities or companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
- 3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 5. The number of holdings and agenda items voted.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

23 September 2024 1091 / 1476

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Does this financial product consider principal adverse impacts on sustainability factors?

★ Yes, ____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Smart Mobility is an actively managed fund that invests globally in companies benefiting from the electrification of transportation. The selection of these stocks is based on fundamental analysis as

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 1092 / 1476

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance. described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's weighted carbon footprint score is equal or better than that of the Custom Bloomberg Climate Transition Benchmark.
- 2. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets can consist of neutral SDG scores.
- 3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 5. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 15% sustainable investments with an environmental objective and a minimum portion of 35% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 1093 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- expenditure
 (CapEx) showing
 the green
 investments
 made by investee
 companies, e.g.
 for a transition to
 a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the environmental objective of Climate Mitigation under the EU Taxonomy.

The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1094 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling
activities directly
enable other
activities to make
a substantial
contribution to an
environmental
objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁶⁴?

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commits to a minimum share of sustainable investments of 15% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

23 September 2024 1095 / 1476

S2978D-202409

⁶⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 35% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

The Sub-fund uses the Custom Bloomberg Climate Transition Benchmark to meet the carbon objective of the Sub-fund.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The reference benchmark is designed in accordance with the requirements of point (d) of Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817.

The Sub-fund's exclusion criteria are similar to those of the reference index, and the Sub-fund's weighted carbon footprint score is equal to or better than the reference benchmark for the carbon objective of the Sub-fund.

23 September 2024 1096 / 1476

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. Bloomberg applies Robeco defined criteria on a regular basis to exclude companies which do not comply with the thematic objective of the Sub-fund. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

How does the designated index differ from a relevant broad market index?

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and carbon footprint of companies. In addition, the designated index is tailored towards the sector-specific focus of the Sub-fund.

Where can the methodology used for the calculation of the designated index be found?

The index methodology can be found at https://assets.bbhub.io/professional/sites/10/Bloomberg-Global-Equity-Paris-Aligned-Climate-Transition-Methodology.pdf.

Where can I find more product specific information online?

k) Robeco Sustainable Healthy Living

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

Product name: Robeco Sustainable Healthy Living

Legal entity identifier: 213800KMESITUG55WI14

Sustainable investment objective

Does this financial product have a sustainable investment objective?						
• • × Yes	• No					
It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective					
It will make a minimum of sustainable investments with a social objective: 70%	It promotes E/S characteristics, but will not make any sustainable investments					

23 September 2024 1098 / 1476

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

What is the sustainable investment objective of this financial product?

The sustainable investments aim to contribute to the Sustainable Development Goals, promoting good health and well-being and contribute to an efficient healthcare system.

Therefore the financial product does not take into account the EU criteria for environmentally sustainable economic activities. The Sub-fund does make sustainable investments with a social objective.

There is no reference benchmark designated for the purpose of attaining the sustainable investment objective.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies with transitioning activities or companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 4. The number of holdings and agenda items voted.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

environmental,

impacts are the most significant

investment

decisions on sustainability How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Sustainable Healthy Living is an actively managed fund that invests globally in companies that promote good health and well-being and contribute to an efficient healthcare system. The selection

23 September 2024 1100 / 1476

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance. of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- 1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets can consist of neutral SDG scores.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 70% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax

compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 1101 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- expenditure
 (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁶⁵?

Yes:

In fossil gas

In nuclear energy

No

23 September 2024 1102 / 1476

⁶⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling
activities directly
enable other
activities to make
a substantial
contribution to an
environmental
objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 90% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 70% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

23 September 2024 1103 / 1476

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective. Not applicable.

Where can I find more product specific information online?

23 September 2024 1105 / 1476

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The sustainable investments of the Sub-fund aim to help mitigate the global challenges related to scarcity, quality, and allocation of water. The sustainable investment objective is attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): Good health and well-being (SDG 3), Clean water and sanitation (SDG 6), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11), Responsible consumption and production (SDG 12), and Life below water (SDG 14).

A part of the investments made by the Sub-fund contribute to the following environmental objectives of the Taxonomy regulation:

- Sustainable use and protection of water and marine resources
- Pollution prevention and control

There is no reference benchmark designated for the purpose of attaining the sustainable objectives promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies with transitioning activities or companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 4. The number of holdings and agenda items voted.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are

23 September 2024 1106 / 1476

considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Principal adverse

negative impacts of

factors relating to

social and employee matters, respect for

human rights, anti-

corruption and antibribery matters.

environmental,

impacts are the most significant

investment

decisions on sustainability

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

23 September 2024 1107 / 1476

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Sustainable Water is an actively managed fund that invests globally in companies offering products and services across the water value chain. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets can consist of neutral SDG scores.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

23 September 2024 1108 / 1476

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- capital
 expenditure
 (CapEx) showing
 the green
 investments
 made by investee
 companies, e.g.
 for a transition to
 a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 5% sustainable investments with an environmental objective and a minimum portion of 45% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the following environmental objectives of the EU Taxonomy Regulation:

- Sustainable use and protection of water and marine resources
- Pollution prevention and control

The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy

23 September 2024 1109 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁶⁶?

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- st As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commits to a minimum share of sustainable investments of 5% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially

23 September 2024 1110 / 1476

S2978D-202409

⁶⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU

Taxonomy.

sustainable investments always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 45% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable

investment objective.

Not applicable.

23 September 2024 1111 / 1476

23 September 2024 1112 / 1476

m) Robeco Global Gender Equality

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Gender Legal entity identifier: 213800FAEA843S2ACV24 Equality

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

•	Yes	• O 🗶 No
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
	It will make a minimum of sustainable investments with a social objective: %	It promotes E/S characteristics, but will not make any sustainable investments

23 September 2024 1113 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- The Sub-fund promotes investment in a portfolio that advances social impact by investing in gender equality leaders combined with sustainable business practices.
- 2. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals (SDGs).
- 3. The Sub-fund applies negative screening.
- 4. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 6. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of companies with a Gender Equality score below 50 as determined through the thematic universe methodology.
 - 2. The number of companies with a positive or neutral SDG score.
- 3. The % of worst ESG performers excluded from the investment universe.
- 4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 5. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 6. The number of holdings and agenda items voted.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 1114 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1115 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse

on sustainability factors relating to

and employee matters, respect for

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

N

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Global Gender Equality is an actively managed fund that invests globally in companies that advance gender equality. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- The Sub-fund invests a minimum of 66.7% in companies with a Gender Equality score of 50 or higher.
- 2. The Sub-fund is solely invested in companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
- 3. The Sub-fund excludes the bottom 20% ranked companies on ESG from the investment universe.
- 4. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 5. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 6. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund, as part of the negative screening process, the Sub-fund commits to a minimum rate of 20% reduction, resulting to excluding the lowest performing companies based on ESG metrics. More information in relation to methodology and data used, can be found at https://www.robeco.com/docm/docu-robeco-sfdr-data-disclosures.pdf.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

23 September 2024 1117 / 1476

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

O

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1A Sustainable 250% #1Aligned with E/S characteristics 90% #1B Other E/S characteristics < 40% #2 Other 0-10%

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Asset allocation describes the

share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

23 September 2024 1118 / 1476

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive

safety and waste

management rules.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁶⁷

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?
 0%.

23 September 2024 1119 / 1476

⁶⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

investments with an

objective that do not

criteria for

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial Not applicable.

S	in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective						
S	t will make a minimum of ustainable investments with a ocial objective: %	It promotes E/S characteristics, but will not make any sustainable investments						

23 September 2024 1122 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 1123 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1124 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse

impacts of

impacts are the most significant negative

investment decisions

on sustainability

and employee

factors relating to environmental, social

matters, respect for human rights, anti-

corruption and anti-

bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)

23 September 2024 1125 / 1476

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Next Digital Billion is an actively managed fund that invests in companies in emerging markets. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 1126 / 1476

- 4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets.

Good governance

practices include

relations,

sound management

structures, employee

remuneration of staff and tax compliance.

23 September 2024 1127 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1128 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁶⁸

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 1129 / 1476

S2978D-202409

⁶⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

More product-specific information can be found on the website:

23 September 2024 1131 / 1476

o) Robeco Biodiversity Equities

Product name: Robeco Biodiversity

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 213800YFIUFHGS8PLX94

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

practices.

The **EU Taxonomy** is a classification

system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

Equities

Sustainable investment objective

Does this financial product have a sustainable investment objective?							
• • X Yes	• No						
It will make a minimum of sustainable investments with an environmental objective: 10% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective						
x It will make a minimum of sustainable investments with a social objective: 40%	It promotes E/S characteristics, but will not make any sustainable investments						

What is the sustainable investment objective of this financial product?

The sustainable investments of the Sub-fund aim to support the sustainable use of natural resources and ecosystem services, as well as technologies, products and services that help to reduce Biodiversity threats or restore natural habitats.

23 September 2024 1132 / 1476

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The foregoing is implemented by mainly invested in companies that advance the following United Nations Sustainable Development Goals (UN SDGs): Good health and well-being (SDG 3), Industry, Innovation and infrastructure (SDG 9), Responsible consumption and production (SDG 12), Life below water (SDG 14) and Life on Land (SDG 15).

A part of the investments made by the Sub-fund contribute to the following environmental objectives of the Taxonomy regulation:

- Protection and restoration of biodiversity and ecosystems
- Sustainable use and protection of water and marine resources
- Pollution prevention and control

There is no reference benchmark designated for the purpose of attaining the sustainable objectives promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of companies with a positive or neutral SDG score.
- 2. The number of companies which are selected for engagement
- 3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 5. The number of holdings and agenda items voted.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

23 September 2024 1133 / 1476

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Biodiversity Equities is an actively managed fund that invests globally in companies that provide innovative materials and process technologies. The selection of these stocks is based on

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 1134 / 1476

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance. fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- 1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework.
- 2. The Sub-fund will at least engage with a minimum of 20% of holdings on an annual basis which show potential for improvement on biodiversity footprint.
- 3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy https://www.robeco.com/files/docm/docu-exclusion-policy.pdf excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 5. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 10% sustainable investments with an environmental objective and a minimum portion of 40% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 1135 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- capital
 expenditure
 (CapEx) showing
 the green
 investments
 made by investee
 companies, e.g.
 for a transition to
 a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the following environmental objectives under the EU Taxonomy:

- Protection and restoration of biodiversity and ecosystems
- Sustainable use and protection of water and marine resources
- Substantial contribution to the transition to a circular economy

The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1136 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling
activities directly
enable other
activities to make
a substantial
contribution to an
environmental
objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁶⁹?

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commits to a minimum share of sustainable investments of 10% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially sustainable investments always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

23 September 2024 1137 / 1476

S2978D-202409

⁶⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 40% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Equities

p) Robeco Global Climate Transition Equities

Product name: Robeco Global Climate Transition

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 213800T59KJ3I92BUA65

It promotes E/S characteristics, but will not

make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics Does this financial product have a sustainable investment objective? Yes No It will make a minimum of It promotes Environmental/Social (E/S) sustainable investments with an characteristics and while it does not have as environmental objective: % its objective a sustainable investment, it will have a minimum proportion of 50% of in economic activities that sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in Taxonomy economic activities that qualify as in economic activities that do environmentally sustainable under the EU not qualify as environmentally Taxonomy sustainable under the EU with an environmental objective in Taxonomy economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

It will make a minimum of

social objective: %

sustainable investments with a

- 1. The Sub-fund promotes Transition-related Investments contributing to the goals of the Paris Agreement.
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels.

23 September 2024 1140 / 1476

- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 4. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 5. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a Sub-fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The proportion of Transition-related Investments contributing to the goals of the Paris Agreement.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 4. The number of holdings and agenda items voted.
- 5. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

23 September 2024 1141 / 1476

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

23 September 2024 1142 / 1476

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and anti-

bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its

23 September 2024 1143 / 1476

investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

investment decisions

What investment strategy does this financial product follow?

Robeco Global Climate Transition Equities is an actively managed Sub-fund that invests in stocks of companies in developed and emerging markets across the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- At least 80% is invested in Transition-related Investments contributing to the goals of the Paris Agreement.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects Sub-fund's exclusions on the universe can he https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.
- 4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 5. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 5% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and Benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

23 September 2024 1144 / 1476

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies

- operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of
 investee
 companies.

23 September 2024 1145 / 1476

hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁷⁰

Yes

In fossil gas In nuclear energy

★ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

To comply with the

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

greenhouse gas

23 September 2024 1146 / 1476

EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

⁷⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

0%. The Sub-fund does not intend to make investments in transitional and enabling activities as defined under the EU Taxonomy. It cannot be excluded that among the Sub-fund's holdings certain investments, among which the investments in transition assets, are transitional or enabling activities as defined under the EU Taxonomy. The Sub-fund will report on these investments in the periodic disclosures.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective.

Therefore, the minimum share of sustainable investments with an environmental objective is 0%. While investments in transition assets may have an environmental objective, these are not per se sustainable investments.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective.

Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

q) Robeco Fashion Engagement

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Fashion Engagement Legal entity identifier: 2138001KO5RJYHRY5H90

23 September 2024 1149 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund promotes the following E/S characteristics

- The Sub-fund promotes structural changes in the fashion industry by engaging with companies on the industry's sustainability challenges. The companies are selected by showing potential and intention to address the industry's sustainability challenges and driving systemic change for the fashion industry.
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 4. The Sub-fund promotes internationally accepted principles set by the International Corporate Governance Network (ICGN), and applies proxy voting in line with Robeco's Stewardship policy.
- 5. The Sub-fund promotes having a lower carbon footprint than that of the general market index referred to in Appendix VI Benchmarks (the "General Market Index").

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of the portfolio value engaged with.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 4. The number of holdings and agenda items voted.
- 5. The Sub-fund promotes having a lower carbon footprint than the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 1150 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1151 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse

impacts of

impacts are the most significant negative

investment decisions

on sustainability

and employee

factors relating to environmental, social

matters, respect for human rights, anti-

corruption and anti-

bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
 - Via the Sub-fund's engagement program, different environmental and social PAIs may be considered, depending on the materiality to the investee company.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

23 September 2024 1152 / 1476

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Fashion Engagement is an actively managed fund that invests in a concentrated selection of global stocks. Stock selection is based on fundamental analysis to invest in companies that are best able to have a clear and measurable improvement in their performance as per targets and key performance indicators defined over three to five years via active engagement, as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- 1. The Sub-fund actively engages with at least 80% of the value of the portfolio. In practice, the Subfund will engage all holdings of the portfolio, typically for a period of 3 to 5 years yet considers room for divestment after an engagement trajectory. Engagement trajectories are assessed annually, based on the progress of pre-determined objectives and targets. The pre-determined objectives and targets are determined by an internally developed framework, created to allow for an in-depth sustainability assessment specific to the fashion industry.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC
 or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms
 will be excluded from the investment universe.
- 4. All equity holdings have granted the right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 5. The Sub-fund's weighted carbon footprint score is 20% better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

23 September 2024 1153 / 1476

<u>robeco-good-governance-policy.pdf</u></u>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here <u>https://www.robeco.com/files/docm/docu-exclusion-list.pdf</u>.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by either being positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

23 September 2024 1154 / 1476

criteria for fossil gas include

limitations on emissions and

switching to renewable power

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make EU Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are EU Taxonomy aligned. The Sub-fund will report on EU Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. At this moment, the expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁷¹

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities? 0%.

23 September 2024 1155 / 1476

-

⁷¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

are sustainable

investments with an

environmentally

EU Taxonomy.

criteria for

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial Not applicable.

23 September 2024 1156 / 1476

product attains the environmental or social characteristics that they promote.

	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments					

23 September 2024 1158 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund promotes the following E/S characteristics

- I. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
- 4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion policy.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The number of holdings and agenda items voted.
- 4. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals, that have both social and environmental objectives. Robeco uses its proprietary SDG Framework and related SDG scores to determine which issuers constitute a sustainable investment as referred to in art 2(17) SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition,

23 September 2024 1159 / 1476

sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impact, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches of these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

23 September 2024 1160 / 1476

Does this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and anti-

bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

23 September 2024 1161 / 1476

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Gravis Digital Infrastructure Income is an actively managed fund that invests worldwide in securities from companies listed in developed markets. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy and considers Principal Adverse Impacts in the investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
- 4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry- established norms and include topics as employee relations, management

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

23 September 2024 1162 / 1476

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

structure, tax compliance and remuneration. A link to the good governance test is made available in the final section of this document.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by either being positive scores via Robeco's SDG Framework. The Sub-fund does not specifically target a minimum percentage of its sustainable investments with an environmental objective but it cannot be ruled out that sustainable investments may include those with an environmental objective. The investments in the category Other, estimated between 0-10%, are mostly in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for both hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on

23 September 2024 1163 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁷²

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of

23 September 2024 1164 / 1476

⁷² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics

that they promote.

Not applicable.

23 September 2024 1165 / 1476

4. GLOBAL BOND SUB-FUNDS

Product name: Robeco High Yield Bonds

It will make a minimum of

social objective: ___%

sustainable investments with a

a) Robeco High Yield Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Environmental and/or social characteristics

Legal entity identifier: 21380044N3COGER50K12

with a social objective

make any sustainable investments

It promotes E/S characteristics, but will not

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective? Yes × No It will make a minimum of It promotes Environmental/Social (E/S) characteristics and while it does not have as sustainable investments with an its objective a sustainable investment, it will environmental objective: ___% have a minimum proportion of 30% of in economic activities that sustainable investments qualify as environmentally with an environmental objective in sustainable under the EU Taxonomy economic activities that qualify as environmentally sustainable under the EU in economic activities that do not qualify as environmentally Taxonomy sustainable under the EU with an environmental objective in economic activities that do not qualify as Taxonomy environmentally sustainable under the EU Taxonomy

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

23 September 2024 1167 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The Sub-fund promotes certain minimum environmental and social safeguards through applying
 exclusion criteria with regards to products and business practices that Robeco believes are
 detrimental to society and incompatible with sustainable investment strategies, such as exposure
 to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
- 4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The % of holdings with an elevated sustainability risk profile.
- 4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

23 September 2024 1168 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1169 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

and employee

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	
---	------	--

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its

23 September 2024 1170 / 1476

investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco High Yield Bonds is an actively managed fund that invests in high yield corporate bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- 4. The Sub-fund invests a minimum of 2% in green, social, sustainability, and/or sustainability-linked bonds.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

23 September 2024 1171 / 1476

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docurobeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance the exclusion list that can https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

expenditure (OpEx) reflecting green

operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and

23 September 2024 1172 / 1476 currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green bonds improves and stabilises. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁷³?

Yes

In fossil gas In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency

objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Not applicable.

b) Robeco Global Credits

Product name: Robeco Global Credits

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 5493003I7YFQHV1J8E29

make any sustainable investments

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental or
social objective,
provided that the
investment does not
significantly harm
any environmental or
social objective and
that the investee
companies follow
good governance

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics Does this financial product have a sustainable investment objective? It will make a minimum of It promotes Environmental/Social (E/S) **characteristics** and while it does not have as sustainable investments with an its objective a sustainable investment, it will environmental objective: % have a minimum proportion of 30% of in economic activities that sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in economic activities that qualify as Taxonomy environmentally sustainable under the EU in economic activities that do not qualify as environmentally Taxonomy sustainable under the EU with an environmental objective in economic activities that do not qualify as Taxonomy environmentally sustainable under the EU Taxonomy with a social objective It will make a minimum of It promotes E/S characteristics, but will not

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

sustainable investments with a

social objective: ___ %

23 September 2024 1176 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The Sub-fund promotes certain minimum environmental and social safeguards through applying
 exclusion criteria with regards to products and business practices that Robeco believes are
 detrimental to society and incompatible with sustainable investment strategies, such as exposure
 to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
- 4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The % of holdings with an elevated sustainability risk profile.
- 4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

23 September 2024 1177 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1178 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 1179 / 1476

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

investment decisions

What investment strategy does this financial product follow?

Robeco Global Credits is an actively managed fund that invests primarily in a diversified portfolio of global investment grade corporate bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- 4. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

23 September 2024 1180 / 1476

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of
 investee
 companies.

23 September 2024 1181 / 1476

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green Bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁷⁴?

Yes

In fossil gas

In nuclear energy

≭ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

0%.

best performance.

Transitional activities

To comply with the

EU Taxonomy, the

criteria for fossil

gas include limitations on

emissions and switching to

renewable power or low-carbon fuels

by the end of 2035.

For nuclear energy,

the criteria include

23 September 2024 1182 / 1476

alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the

⁷⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

are sustainable

23 September 2024 1183 / 1476

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

23 September 2024 1185 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The Sub-fund promotes certain minimum environmental and social safeguards through applying
 exclusion criteria with regards to products and business practices that Robeco believes are
 detrimental to society and incompatible with sustainable investment strategies, such as exposure
 to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes having a lower environmental footprint than that of the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The environmental footprint of the Sub-fund compared to the General Market Index.
- The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 4. The Sub-fund's weighted average ESG score as compared to the General Market Index.
- 5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 1186 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1187 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

*	Yes,	
*	163,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco QI Global Multi-Factor Credits is an actively managed fund that invests systematically in predominantly investment grade credits. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund focuses on offering exposure to a number of quantitative strategies in a diversified way, such as, but not limited to, a strategy focusing on bonds with (Low volatility); on bonds with an attractive valuation (Value) and a strategy focusing on bonds of companies with a medium term attractive performance trend (Momentum). The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure. In case of a rebalancing of the portfolio, the portfolio may temporarily, but no longer than 72 hours, deviate from its binding elements, with the exception of adherence to the exclusion policy that applies at all times.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 2. The Sub-fund's carbon, water and waste footprint score is better than that of the General Market Index.
- 3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

Good governance practices include sound management structures, employee relations, remuneration of staff

and tax compliance.

Asset allocation

describes the share of

investments in

specific assets. Taxonomy-aligned

activities are

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docurobeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance the exclusion list that can https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

turnover reflecting the share of revenue from green activities

expressed as a share

- investee companies capital expenditure
- (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities οf investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the

23 September 2024 1190 / 1476 underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

O%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund makes investments in equities and bonds and therefore it does not have sovereign exposures. At this moment, the expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

safety and waste management rules.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁷⁵?

Yes

In fossil gas

In nuclear energy

≭ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

23 September 2024 1191 / 1476

⁷⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

corresponding to the best performance.

environmentally

EU Taxonomy.

criteria for

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the

23 September 2024 1192 / 1476

environmental or social characteristics that they promote.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund promotes the following E/S characteristics for investments in corporate bonds:

23 September 2024 1194 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes having a lower environmental footprint than the corporate bonds in the general market index referred to in Appendix VI Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 4. The Sub-fund promotes having a weighted average ESG score that is better than that of the corporate bonds in the General Market Index.
- 5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

The Sub-fund has the following E/S characteristics for investments in government bonds:

- 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
- 2. The Sub-fund promotes investment in countries that perform well on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates a wide range of ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
- 3. The Sub-fund promotes having a lower carbon footprint than the government bonds in the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators for investments in corporate bonds:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The Sub-fund's weighted carbon, water and waste footprint compared to corporate bonds in the General Market Index.
- 3. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 4. The Sub-fund's weighted average ESG score compared to the corporate bonds in the General Market Index
- 5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

The Sub-fund has the following E/S characteristics for investments in government bonds:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The weighted average score on Robeco's Country Sustainability Ranking.

23 September 2024 1195 / 1476

3. The Sub-fund's weighted carbon emissions per capita compared to the government bonds in the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international

23 September 2024 1196 / 1476

treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered via the applied normative and activity-based exclusions:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 1197 / 1476

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Global Multi-Factor Bonds is an actively managed fund that invests globally in bonds issued by governments, agencies and corporates. The selection of these bonds is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund uses low-risk, quality, value, momentum and size factors to select the most attractive bonds.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure. In case of a rebalancing of the portfolio, the portfolio may temporarily, but no longer than 72 hours, deviate from its binding elements, with the exception of adherence to the exclusion policy that applies at all times.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements for investments in corporate bonds:

- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 2. The Sub-fund's weighted carbon, water and waste footprint score of corporate bonds in portfolio are better than those of the corporate bonds in the General Market Index.
- 3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

of the international guidelines during the investment period, the company will become part of the

23 September 2024 1198 / 1476

- Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 4. The Sub-fund's weighted average ESG score of the corporate bonds in portfolio is better than that of the corporate bonds in the General Market Index.
- 5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

The Sub-fund has the following E/S characteristics for investments in government bonds:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund's portfolio has a better average ESG score on Robeco's Country Sustainability Ranking than the General Market Index.
- 3. The Sub-fund's weighted carbon emissions per capita of the government bonds in portfolio is better than that of the government bonds in the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 10% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 1199 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of
 investee
 companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1200 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁷⁶?

Yes

In fossil gas In nuclear energy

* No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 10% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 1201 / 1476

⁷⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

e) Robeco Global Credits – Short Maturity

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental or
social objective,
provided that the
investment does not
significantly harm
any environmental or
social objective and
that the investee
companies follow
good governance

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Credits – Short Maturity

Legal entity identifier: 2138001CC7H5L9AYFW22

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

23 September 2024 1204 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
- 4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The % of holdings with an elevated sustainability risk profile.
- 4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

23 September 2024 1205 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1206 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of
 this PAI is currently restricted to applying exclusions to palm oil producing companies and for
 any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation
 to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Water and waste indicators (PAI 7-9, Table 1)
 Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 1207 / 1476

investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Global Credits — Short Maturity is an actively managed fund that invests primarily in a diversified portfolio of global investment grade corporate bonds with a short maturity.

The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- 4. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

23 September 2024 1208 / 1476

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

characteristics promoted by the financial product?

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

of How does the use of derivatives attain the environmental or social

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of
 investee
 companies.

23 September 2024 1209 / 1476

underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green Bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁷⁷?

Yes

In fossil gas In nuclear energy

≭ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

23 September 2024 1210 / 1476

S2978D-202409

⁷⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

S2978D-202409

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

23 September 2024 1213 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The Sub-fund promotes certain minimum environmental and social safeguards through applying
 exclusion criteria with regards to products and business practices that Robeco believes are
 detrimental to society and incompatible with sustainable investment strategies, such as exposure
 to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
- 4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The % of holdings with an elevated sustainability risk profile.
- 4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

23 September 2024 1214 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1215 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Water and waste indicators (PAI 7-9, Table 1)
 Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

What investment strategy does this financial product follow?

Robeco Corporate Hybrid Bonds is an actively managed fund that invests in global corporate hybrids bonds issued by non financials. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- 4. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

23 September 2024 1217 / 1476

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docurobeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance the exclusion list that can https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

What is the asset allocation planned for this financial product?

Taxonomy-aligned activities are expressed as a share of:

Asset allocation

describes the

investments in

specific assets.

share of

- turnover reflecting share the of revenue from green activities investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the

23 September 2024 1218 / 1476 underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green Bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁷⁸?

Yes

In fossil gas

In nuclear energy

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

To comply with the

EU Taxonomy, the

criteria for fossil

gas include limitations on

emissions and switching to

renewable power or low-carbon fuels

by the end of 2035.

For nuclear energy,

criteria for

objective that do not

take into account the

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

23 September 2024 1220 / 1476

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

23 September 2024 1222 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The Sub-fund promotes certain minimum environmental and social safeguards through applying
 exclusion criteria with regards to products and business practices that Robeco believes are
 detrimental to society and incompatible with sustainable investment strategies, such as exposure
 to controversial behaviour, controversial weapons, and fossil fuels.
- The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
- 5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The environmental footprint score of the Sub-fund compared to the General Market Index.
- The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 4. The Sub-fund's weighted average ESG score as compared to the General Market Index.
- 5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

23 September 2024 1223 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1224 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

**	Yes,	
-	163,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint
 until data quality and coverage of the PAIs will improve.
 Post-investment, the following principal adverse impacts on sustainability factors are taken
 into account via Robeco's entity engagement program:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 1225 / 1476

.

No

What investment strategy does this financial product follow?

Robeco QI Global Multi-Factor High Yield is an actively managed fund that invests systematically in high-yield bonds. The selection of these bonds is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund focuses on offering exposure to a number of quantitative strategies in a diversified way, such as, but not limited to, a strategy focusing on bonds with (Low volatility); on bonds with an attractive valuation (Value) and a strategy focusing on bonds of companies with a medium term attractive performance trend (Momentum). The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure. In case of a rebalancing of the portfolio, the portfolio may temporarily, but no longer than 72 hours, deviate from its binding elements, with the exception of adherence to the exclusion policy that applies at all times.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 2. The Sub-fund's carbon, water and waste footprint is better than the General Market Index.
- 3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
- 4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
- 5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Good governance practices include sound management

23 September 2024 1226 / 1476

structures, employee relations, remuneration of staff and tax compliance.

Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

0

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 20% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2** Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

describes the share of investments in specific assets.

Asset allocation

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- expenditure (OpEx)
 reflecting green
 operational
 activities of
 investee
 companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

23 September 2024 1227 / 1476

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund makes investments in equities and bonds and therefore it does not have sovereign exposures. At this moment, the expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on

In fossil gas In nuclear energy

≭ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

0%.

The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 20% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investment because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

criteria for

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are Not applicable.

23 September 2024 1229 / 1476

indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

h) Robeco SDG Credit Income

Product name: Robeco SDG Credit Income

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 213800T791C07EB3NL58

make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics Does this financial product have a sustainable investment objective? It will make a minimum of It promotes Environmental/Social (E/S) **characteristics** and while it does not have as sustainable investments with an its objective a sustainable investment, it will environmental objective: % have a minimum proportion of 70% of in economic activities that sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in economic activities that qualify as Taxonomy environmentally sustainable under the EU in economic activities that do not qualify as environmentally Taxonomy sustainable under the EU with an environmental objective in economic activities that do not qualify as Taxonomy environmentally sustainable under the EU Taxonomy with a social objective It will make a minimum of It promotes E/S characteristics, but will not

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

sustainable investments with a

social objective: ___%

23 September 2024 1231 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- 1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals (SDGs).
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- Investments in companies with a positive or neutral SDG score based on the internally developed SDG Framework.
- 2. For its allocation to Emerging Markets sovereign bonds: investments in countries with a positive or neutral SDG score based on the internally developed SDG Framework.
- 3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 5. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition,

23 September 2024 1232 / 1476

sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Robeco's SDG Framework assesses the contribution of companies and countries to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

**	Voc	
×	Yes, _	

23 September 2024 1233 / 1476

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' and countries' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies and countries on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco SDG Credit Income is an actively managed fund that invests in companies and countries that contribute to realizing the UN Sustainable Development Goals (SDGs). The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund is invested in bonds that hold a positive or neutral SDG score.
- 2. For its allocation to Emerging Markets sovereign bonds: The Sub-fund is solely invested in countries that hold a positive or neutral SDG score.
- 3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

23 September 2024 1234 / 1476

- 4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked honds

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

O

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 70% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

sound management structures, employee relations, remuneration of staff and tax compliance.

practices include

Asset allocation describes the share of investments in specific assets.

32978D-202409

23 September 2024 1235 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of
 investee
 companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green Bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1236 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸⁰?

Yes

In fossil gas In nuclear energy

* No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies and countries that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 70% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because

23 September 2024 1237 / 1476

⁸⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies and countries that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Not applicable.

23 September 2024 1238 / 1476

23 September 2024 1239 / 1476

i) Robeco Global SDG Credits

Product name: Robeco Global SDG Credits

social objective: ___%

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 213800CKSU373L6J3U62

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental or
social objective,
provided that the
investment does not
significantly harm
any environmental or
social objective and
that the investee
companies follow
good governance

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics Does this financial product have a sustainable investment objective? It will make a minimum of It promotes Environmental/Social (E/S) **characteristics** and while it does not have as sustainable investments with an its objective a sustainable investment, it will environmental objective: % have a minimum proportion of 70% of in economic activities that sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in economic activities that qualify as Taxonomy environmentally sustainable under the EU in economic activities that do not qualify as environmentally Taxonomy sustainable under the EU with an environmental objective in economic activities that do not qualify as Taxonomy environmentally sustainable under the EU Taxonomy with a social objective It will make a minimum of It promotes E/S characteristics, but will not sustainable investments with a make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

23 September 2024 1240 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- 1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition,

23 September 2024 1241 / 1476

sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

and employee

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance. Robeco Global SDG Credits is an actively managed fund that invests in corporate bonds in the global developed and emerging markets. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

23 September 2024 1243 / 1476

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- The Sub-fund is invested in bonds that hold a positive or neutral SDG score.
- 2. Sub-fund's portfolio complies with Robeco's **Policy Exclusion** (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 4. The Sub-fund invests a minimum of 10% in green, social, sustainability, and/or sustainability-linked bonds.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docurobeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance reflected in the exclusion list that can be accessed https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 70% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations. remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

> 23 September 2024 1244 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of
 investee
 companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green Bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1245 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸¹?

Yes

In fossil gas In nuclear energy

≭ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 70% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 1246 / 1476

⁸¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Reference

Not applicable.

23 September 2024 1247 / 1476

23 September 2024 1248 / 1476

j) Robeco SDG High Yield Bonds

Product name: Robeco SDG High Yield

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 2138004EB4XIM39VFW48

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

sonas

Environmental and/or social characteristics Does this financial product have a sustainable investment objective? Yes No It will make a minimum of It promotes Environmental/Social (E/S) characteristics and while it does not have as sustainable investments with an its objective a sustainable investment, it will environmental objective: % have a minimum proportion of 70% of in economic activities that sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in Taxonomy economic activities that qualify as environmentally sustainable under the EU in economic activities that do not qualify as environmentally Taxonomy sustainable under the EU with an environmental objective in economic activities that do not qualify as Taxonomy environmentally sustainable under the EU Taxonomy with a social objective It will make a minimum of It promotes E/S characteristics, but will not make any sustainable investments sustainable investments with a social objective: ___%

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

23 September 2024 1249 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- 1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The number of companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition,

23 September 2024 1250 / 1476

sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

23 September 2024 1251 / 1476

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and anti-

bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco SDG High Yield Bonds is an actively managed fund that invests in global corporate bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund is invested in bonds that hold a positive or neutral SDG score.
- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion

23 September 2024 1252 / 1476

criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

- 3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 4. The Sub-fund invests a minimum of 2% in green, social, sustainability, and/or sustainability-linked honds
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 70% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 1253 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of
 investee
 companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green Bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1254 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸²?

Yes

In fossil gas In nuclear energy

* No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 70% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 1255 / 1476

S2978D-202409

⁸² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

23 September 2024 1256 / 1476

Where can I find more product specific information online?

23 September 2024 1257 / 1476

k) Robeco Global Green Bonds

Product name: Robeco Global Green Bonds

social objective: ___%

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 213800TZF6IC5ZUI3146

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental or
social objective,
provided that the
investment does not
significantly harm
any environmental
or social objective
and that the
investee companies
follow good

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a

governance

practices.

list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective Does this financial product have a sustainable investment objective? It promotes Environmental/Social (E/S) It will make a minimum of **characteristics** and while it does not have as sustainable investments with an its objective a sustainable investment, it will environmental objective: 70% have a minimum proportion of % of in economic activities that sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in economic activities that qualify as Taxonomy environmentally sustainable under the EU in economic activities that do not qualify as environmentally Taxonomy sustainable under the EU with an environmental objective in economic activities that do not qualify as Taxonomy environmentally sustainable under the EU Taxonomy with a social objective It will make a minimum of It promotes E/S characteristics, but will not sustainable investments with a make any sustainable investments

What is the sustainable investment objective of this financial product?

The Sub-fund invests predominantly in Green Bonds, as well as in social and sustainable bonds.

With these investments, the Sub-fund finances investments that contribute to environmental goals like:

· Climate change mitigation and adaptation,

Sustainability indicators measure
how the sustainable
objectives of this

23 September 2024 1258 / 1476

financial product are attained.

- Sustainable use and protection of water and marine resources,
- Transition to a circular economy,
- Waste prevention and recycling,
- · Pollution prevention, and
- Protection of healthy ecosystems.

There is a reference benchmark designated for the purpose of attaining the sustainable objectives promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- The % of the Sub-fund invested in Green Bonds.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainable Bonds, significant harm is avoided by the application of Green Bonds Principles.

For a large share of Green, Social and Sustainable bonds, Robeco adds an extra assessment on sustainability factors by applying Robeco's Green Bonds Framework or Social Bond Framework.

Via these frameworks, the following adverse impacts are directly considered:

- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)
 For Green bonds, there is no disclosures on GHG emissions. Yet, avoided emissions (scope 4 emissions) are considered. For Social bonds, Robeco considers board gender diversity (Table 1, PAI 13) depending on whether the use of proceeds of the social bond will tackle gender diversity issues.

Lastly, Robeco's SDG Framework is considered for the analysis of green, social or sustainable bonds. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

23 September 2024 1259 / 1476

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Ty.

Principal adverse

negative impacts of

factors relating to

matters, respect for

human rights, anticorruption and anti-

bribery matters.

environmental,

impacts are the most significant

investment

decisions on sustainability

Does this financial product consider principal adverse impacts on sustainability factors?

×

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, green, social and sustainable bonds are assessed via Robeco's Green Bond Framework and Social Framework, as well as via Robeco's SDG Framework. These framework directly and indirectly assess PAI indicators

Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website.

No

What investment strategy does this financial product follow?

Robeco Global Green Bonds is an actively managed fund that invests in Green Bonds globally issued by governments, government-related agencies and corporates. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Other bonds invested in are either social bonds, sustainable bonds, or sustainability-linked bonds. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 1260 / 1476

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- 1. The Sub-fund allocates a minimum 80% of the bond exposure ex government bonds in Green Bonds based on external vendor data or the internally developed framework by Robeco.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 70% sustainable investments with an environmental objective, defined as investments in green, social or sustainable bonds. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets.

23 September 2024 1261 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- capital
 expenditure
 (CapEx) showing
 the green
 investments
 made by investee
 companies, e.g.
 for a transition to
 a green economy.
- operational expenditure
 (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging as well as liquidity management. This includes the usage of derivatives to manage currency and duration exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. Derivatives linked to corporate exposure are not allowed.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

No

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to all environmental objectives under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green bonds improves and stabilizes.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in Green, Social and Sustainable bonds and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸³?

Yes:

In fossil gas

In nuclear energy

23 September 2024 1262 / 1476

⁸³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling
activities directly
enable other
activities to make
a substantial
contribution to an
environmental
objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. The Sub-fund commits to a minimum share of sustainable investments of 70% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. We do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific social investment objective. The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

23 September 2024 1263 / 1476

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable

investment objective.

Yes, the Sub-fund uses the Bloomberg MSCI US Green Bond Index as a reference index to meet the sustainable investment objective of The Sub-fund.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Given that sustainable investment objective of The Sub-fund is to finance investment in Green Bonds, the reference index is aligned with such objective of The Sub-fund by applying clearly defined rules for evaluating Green Bonds composition in the index.

Bloomberg MSCI evaluates Green Bonds to ensure adherence to established Green Bond Principles (GBP) and to examine bonds by their environmental use of proceeds. The index provider follows an eligibility criteria along four dimensions as per the GBP for assessing eligibility to index. In this way The Sub-fund's investment objective is aligned with the reference index.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The methodology of the reference index follows rebalancing rules which ensures alignment with the investment strategy of The Sub-fund.

The Bloomberg MSCI US Green Bond Index is rebalanced on the last business day of each month. New bond issues are not added to the Projected Universe until after the Green Bond Evaluation. On the 25th calendar day of each month, the list of Green Bonds that are evaluated is updated by MSCI ESG Research which are taken into consideration before rebalancing.

How does the designated index differ from a relevant broad market index?

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for eligibility and inclusion of Green Bonds.

23 September 2024 1264 / 1476

Where can the methodology used for the calculation of the designated index be found?

The index methodology can be found on the relevant webpages by the index provider: https://www.msci.com

Where can I find more product specific information online?

What is the sustainable investment objective of this financial product?

The sustainable investments of the Sub-fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris Agreement to keep the maximum global temperature rise well-below 2°C.

23 September 2024 1266 / 1476

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund also promotes investment in green, social, sustainability and/or sustainability-linked bonds used to finance environmental and social projects.

The sustainable investments contribute partly to the environmental objective of Climate Mitigation under the Taxonomy regulation.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- The Sub-fund's weighted carbon footprint compared to the Paris-Aligned Benchmark.
- 2. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.
- 3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 4. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris-Aligned Benchmark follow eligibility requirements as per Article 12 of the EU regulation EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

All sustainable investments are constituents of Solactive Paris Aligned Global Corporate Index or follow the benchmark methodology. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

23 September 2024 1267 / 1476

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as the methodology of the benchmark provider.

environmental,

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, the Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered via the applied normative and activity-based exclusions:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this
 PAI is currently restricted to applying exclusions to palm oil producing companies and for any
 breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to
 biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Via the carbon footprint performance target of the Sub-fund, the PAI on Carbon footprint (PAI 2, Table 1) is considered via the Paris-Aligned Benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this
 PAI is currently restricted to applying exclusions to palm oil producing companies and for any
 breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to
 biodiversity.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

23 September 2024 1268 / 1476

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Climate Global Credits is an actively managed fund that invests mainly in nongovernment bonds all around the world. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's weighted carbon footprint is better than the Paris-Aligned Benchmark.
- 2. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.
- 3. The Sub-fund does not invest in activities that are excluded on the basis of Article 12 of the EU regulation Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks as applicable. In addition, the Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Subfund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

23 September 2024 1269 / 1476

What is the asset allocation and the minimum share of sustainable investments?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- reflecting the share of revenue from green activities of investee companies
- expenditure
 (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure
 (OpEx) reflecting
 green operational
 activities of
 investee
 companies.

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 50% sustainable investments with an environmental objective, measured by the by issuers that are part of the Paris-Aligned Benchmark. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging as well as liquidity management. This includes the usage of derivatives to manage currency and duration exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. Derivatives linked to corporate exposure are not allowed.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the climate change mitigation objective under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. Given the current commitment, the expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1270 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling
activities directly
enable other
activities to make
a substantial
contribution to an
environmental
objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸⁴?

Yes:

In fossil gas

In nuclear energy

≭ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund makes sustainable investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commit to a minimum share of sustainable investments of 50% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies with a low carbon footprint, in line with a low carbon scenario. However, some of these companies with a low carbon footprint may not be exposed to activities that are eligible under the EU Taxonomy. The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

23 September 2024 1271 / 1476

⁸⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, it could be possible that some companies contribute to social objectives either by being a part of the Paris-Aligned Benchmark or having a positive score via Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective. Yes, the Sub-fund follows the Solactive Paris Aligned Global Corporate Index as a reference index to meet the carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The reference index is aligned with the carbon reduction objective of the Sub-fund by applying a methodology with clearly defined rules for evaluating securities on their carbon footprint.

The methodology of the reference index is designed in accordance with the requirements of point (d) of Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817. This means that amongst others, the reference index complies with those criteria set out

23 September 2024 1272 / 1476

in Article 12 of the EU Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks.

The Sub-fund also applies the aforementioned exclusion criteria, and the Sub-fund's weighted carbon footprint score is always equal to or better than the Solactive Paris Aligned Global Corporate Index.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The methodology of the reference index follows rebalancing rules on a monthly basis which ensures alignment with the investment strategy and objective of the Sub-fund. The data used is sourced externally from Institutional Shareholder Services Inc.

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

How does the designated index differ from a relevant broad market index?

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on greenhouse gas emission reduction and related exclusions.

Where can the methodology used for the calculation of the designated index be found?

The index methodology can be found on the relevant webpages by the index provider: https://www.solactive.com/indices/

Where can I find more product specific information online?

More product-specific information can be found on the website:

m) Robeco Climate Global Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental or
social objective,
provided that the
investment does not
significantly harm
any environmental or
social objective and
that the investee
companies follow
good governance

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Climate Global Legal entity identifier: 213800QNYW5DK72HBQ97

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

23 September 2024 1274 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

 The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

The Sub-fund has the following E/S characteristics as promoted by the Sub-fund for the corporate bonds:

- I. The Sub-fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris Agreement to keep the maximum global temperature rise well-below 2°C.
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.

The Sub-fund has the following E/S characteristics as promoted by the Sub-fund for government bonds:

- 1. The Sub-fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris Agreement to keep the maximum global temperature rise well-below 2°C.
- The Sub-fund promotes certain minimum environmental and social safeguards through applying
 exclusion criteria with regards to products and business practices that Robeco believes are
 detrimental to society and incompatible with sustainable investment strategies, such as exposure
 to controversial behaviour, controversial weapons, and fossil fuels.

The sustainable investments made by the Sub-fund will contribute partly to the environmental objective of Climate Mitigation under the Taxonomy regulation. The Sub-fund follows the Solactive Paris Aware Global Aggregate Index as a reference index to meet the carbon footprint reduction objective of the Subfund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

1. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

The Sub-fund has the following sustainability indicators to measure the attainment of environmental or social characteristics promoted by the Sub-fund for the corporate bonds:

- 1. The Sub-fund's weighted carbon footprint compared to the Solactive Paris Aware Global Aggregate
- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises.

The Sub-fund has the following sustainability indicators to measure the attainment of environmental or social characteristics promoted by the Sub-fund for government bonds:

- 1. The Sub-fund's weighted carbon emissions per capita compared to the Solactive Paris Aware Global Aggregate Index.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.

23 September 2024 1275 / 1476

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments of the Sub-fund contribute to the sustainable investment objective of keeping the maximum global temperature rise below 2°C by reducing the carbon footprint of its portfolio.

The sustainable investments contribute partly to the environmental objective of Climate Mitigation under the EU Taxonomy regulation.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris-Aligned Benchmark follow eligibility requirements as per Article 12 of the EU regulation EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks and follows Robeco's Exclusion policy. For corporate investments, in accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

All sustainable investments in corporates are constituents of the Solactive Paris Aware Global Aggregate Index, or follow the benchmark methodology. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis. More information on how this is done is explained in question B.1.

A detailed description of the incorporation of principal adverse impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments in corporates are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy. Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches

23 September 2024 1276 / 1476

of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

★ Yes,	
---------------	--

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, for corporates the following principal adverse impacts on sustainability factors are considered.

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Via the carbon footprint performance target of the Sub-fund, the PAI on Carbon footprint (PAI 2, Table 1) is considered via the Paris-Aligned Benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Principal adverse

23 September 2024 1277 / 1476

 In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Climate Global bonds is an actively managed fund that invests in bonds globally. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

1. The Sub-fund invests a minimum of 2.5% in green, social, sustainability, and/or sustainability-linked

The Sub-fund has the following binding elements to attain the environmental or social characteristics promoted by the corporate bonds:

- 1. The Sub-fund's weighted carbon footprint score is equal to or better than the Solactive Paris Aware Global Aggregate Index.
- 2. The Sub-fund does not invest in activities that are excluded on the basis of Article 12 of the EU regulation Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks as applicable. In addition, the Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.

The Sub-fund has the following binding elements to attain the sustainable investment objective for government bonds:

1. The Sub-fund's weighted carbon emissions per capita is equal to or better than that of the Solactive Paris Aware Global Aggregate Index.

23 September 2024 1278 / 1476

- 2. The Sub-fund does not invest in activities that are excluded on the basis of Article 12 of the EU regulation Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks as applicable. In addition, the Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

The Sub-fund plans to make a minimum of 2.5% sustainable investments, measured by the proportion of the green, social, sustainability, and/or sustainability-linked bonds. The investments in the category non-sustainable, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 1279 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of
 investee
 companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. As and when the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the climate change mitigation objective under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. Given the current commitment, the expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1280 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸⁵?

Ye

In fossil gas In nuclear energy

≭ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, however the Sub-fund does not intend to set a minimum target.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 2.5% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 1281 / 1476

S2978D-202409

⁸⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social, sustainabilityg or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective, however the Sub-fund does not intend to set a minimum target. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

The Sub-fund follows the Solactive Paris Aware Global Aggregate Index as a reference index to meet the carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise below 2°C .

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

The reference index is aligned with the carbon reduction objective of the Sub-fund by applying a methodology with clearly defined rules for evaluating securities on their carbon footprint. The methodology of the reference index is designed in accordance with the requirements of point (d) of Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817. This means that amongst others for the corporate bond part, the reference index is aligned with those criteria set out in Article 12 of the EU Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks. The Sub-fund also applies the aforementioned exclusion criteria, and the Sub-fund's overall weighted carbon footprint score in each of the government part and the corporate part is always equal to or better than the respective part of the Solactive Paris Aware Global Aggregate Index.

23 September 2024 1282 / 1476

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The methodology of the reference index follows rebalancing rules on a monthly basis for index eligibility and rebalances on a six month basis for decarbonization, which ensures alignment with the investment strategy and objective of the Sub-fund. The index uses data sourced from Institutional Shareholder Services Inc for corporate issuers and from the Emissions Database for Global Atmospheric Research (EDGAR) for sovereign issuers.

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

How does the designated index differ from a relevant broad market index?

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on decarbonization and on greenhouse gas emission reduction and related exclusions.

Where can the methodology used for the calculation of the designated index be found?

The index methodology can be found on the relevant webpages by the index provider: https://www.solactive.com/indices/

Where can I find more product specific information online?

sust	Il make a minimum of ainable investments with a al objective: 10%		romotes E/S characteristics, but will not ke any sustainable investments		

What is the sustainable investment objective of this financial product?

The Sub-fund advances the United Nation's Sustainable Development Goals (SDGs) and the Sub-fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris Agreement to keep the maximum global temperature rise well-below 2°C

23 September 2024 1284 / 1476

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund has a carbon-reduction objective and uses the Solactive Paris Aligned Global Corporate Index to monitor the carbon profile of the Sub-fund.

A part of the investments made by the Sub-fund contribute to the environmental objective of Climate Mitigation under the EU Taxonomy regulation.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The Sub-fund's weighted carbon footprint score compared to the Paris-Aligned Benchmark.
- 2. The Sub-fund's weighted environmental footprint score compared to the Paris-Aligned Benchmark.
- 3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 5. The proportion of companies that hold a negative SDG score (-3, -2 or -1) based on the internally developed SDG Framework.
- 6. The Sub-fund's weighted average ESG score compared to the Paris-Aligned Benchmark.
- 7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the general market index weight in companies with a positive SDG score (1,2,3).

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris-Aligned Benchmark follow eligibility requirements as per Article 12 of the EU regulation EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Sustainable investments can be constituents of Paris-Aligned Benchmark. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis.

Sustainable investments that are not constituents of Paris-Aligned Benchmark, should all have a positive score on Robeco's SDG Framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on

23 September 2024 1285 / 1476

the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy, Robeco's SDG Framework, and the methodology of the benchmark provider.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration
 of this PAI is currently restricted to applying exclusions to palm oil producing companies and
 for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in
 relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1), via the Paris-Aligned Benchmark
 - Water and waste indicators (PAI 8-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 1286 / 1476

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Global SDG & Climate Multi-Factor Credits is an actively managed fund that invests systematically in predominantly investment grade bonds of companies that advance the United Nations Sustainable Development Goals (SDGs) and contribute to maintaining the global temperature rise below 2°C. The selection of these bonds is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund focuses on offering exposure to a number of quantitative strategies in a diversified way, such as, but not limited to, a strategy focusing on bonds with (Low volatility); on bonds with an attractive valuation (Value) and a strategy focusing on bonds of companies with a medium term attractive performance trend (Momentum). The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure. In case of a rebalancing of the portfolio, the portfolio may temporarily, but no longer than 72 hours, deviate from its binding elements, with the exception of adherence to the exclusion policy that applies at all times.

decisions based on factors such as investment objectives and risk tolerance.

The investment

strategy guides

investment

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's weighted carbon footprint is better than that of the Paris-Aligned Benchmark.
- 2. The Sub-fund's weighted water and waste footprint is better than that of the Paris-Aligned Benchmark.
- 3. The Sub-fund fully complies with activity based exclusions with regards to products (including controversial weapons, tobacco, palm oil, and thermal coal, upstream oil and gas and electricity producers in line with Article 12 of the EU regulation Climate Transition Benchmarks, EU Parisaligned Benchmarks and sustainability-related disclosures for benchmarks) as applicable. In addition, the Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 5. The Sub-fund excludes all negative SDG scores (-3, -2 or -1).
- 6. The Sub-fund's weighted average ESG score is better than that of the Paris-Aligned Benchmark.
- 7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is at least 20% better than that of the general market index, measured as a ratio.

23 September 2024 1287 / 1476

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- capital
 expenditure
 (CapEx) showing
 the green
 investments
 made by investee
 companies, e.g.
 for a transition to
 a green economy.
- operational expenditure (OpEx) reflecting green operational

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 50% sustainable investments with an environmental objective and a minimum portion of 10% sustainable investments with a social objective, measured either by issuers that are part of the Paris-Aligned Benchmark (considered to have an environmental objective) or by holdings that have a positive score via Robeco's SDG Framework.

The sustainable investments with an environmental objective may also contribute to SDGs that attain the social objectives of the Sub-fund, and vice versa. However, following regulatory guidelines an investment will not be double counted (so not counted for both environmental and social objectives). The investments in the category non- sustainable, estimated between 0-10%, are in cash and cash equivalents.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging as well as liquidity management. This includes the usage of derivatives to manage currency and duration exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. Derivatives linked to corporate exposure are not allowed.

23 September 2024 1288 / 1476

activities of investee companies.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the climate change mitigation objective under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸⁶? Yes:

In fossil gas In nuclear energy

≭ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

23 September 2024 1289 / 1476

the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

⁸⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund makes sustainable investments with environmental objectives that do not qualify as Taxonomy-aligned. Given the Sub-fund's investment strategy and the specific environmental investment objective, the Sub-fund commits to a minimum share of sustainable investments of 50% with an environmental objective. The environmental objectives of the Sub-fund are attained by investing in companies, in line with a low carbon scenario stipulated by the Paris-aligned benchmark methodology.

In addition, the Sub-fund intends to make sustainable investments off-benchmark, measured as positive scores via Robeco's SDG Framework. Among those could be sustainable investments with environmental objectives which are companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

The sum of sustainable investments with an environmental objective and socially sustainable investments will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Within the off-benchmark holdings (i.e. holdings that are not part of the Paris-Aligned Benchmark), the Sub-fund intends to make sustainable investments with a social objective. Given the Sub-fund's investment strategy and the specific social investment objective, the Sub-fund commits to a minimum share of sustainable investments of 10% with a social objective, measured by off-benchmark holdings that have a positive score via Robeco's SDG Framework. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and

objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective. Yes, the Sub-fund follows the Solactive Paris Aligned Global Corporate Index as a reference index to meet the carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The reference index is aligned with the carbon reduction objective of the Sub-fund by applying a methodology with clearly defined rules for evaluating securities on their carbon footprint. The methodology of the reference index is designed in accordance with the requirements of point (d) of Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817. This means that amongst others, the reference index complies with those criteria set out in Article 12 of the EU Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks. The Sub-fund also applies the aforementioned exclusion criteria, and the Sub-fund's weighted carbon footprint score is always better than the Solactive Paris Aligned Global Corporate Index.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The methodology of the reference index follows rebalancing rules on a monthly basis which ensures alignment with the investment strategy and objective of the Sub-fund. The data used is sourced externally from Institutional Shareholder Services Inc.

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

How does the designated index differ from a relevant broad market index?

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on greenhouse gas emission reduction and related exclusions.

23 September 2024 1291 / 1476

Where can the methodology used for the calculation of the designated index be found?

The index methodology can be found on the relevant webpages by the index provider: https://www.solactive.com/indices/

o) Robeco Transition Emerging Credits

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental or
social objective,
provided that the
investment does not
significantly harm
any environmental or
social objective and
that the investee
companies follow
good governance

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Transition Emerging

Legal entity identifier: 5493008QKCFCW6Q0H681

Environmental and/or social characteristics

Do	Does this financial product have a sustainable investment objective?					
•	Yes	• No				
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective				
	It will make a minimum of sustainable investments with a social objective: %	It promotes E/S characteristics, but will not make any sustainable investments				

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

23 September 2024 1293 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- 1. The Sub-fund promotes Transition-related Investments contributing to the goals of the Paris Agreement and/or Transition-related Investments with an Environmental and/or Social objective.
- The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.
- 3. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals (SDGs).
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 5. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 6. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The proportion of Transition-related Investments contributing to the goals of the Paris Agreement and Transition-related Investments with an Environmental and/or Social objective.
- 2. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.
- The proportion of companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
- 4. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises.
- 5. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 6. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

23 September 2024 1294 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1295 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

and employee

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	
~	103,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30

April at the Sub-fund page highlighted in final section of this document.

23 September 2024 1296 / 1476

S2978D-202409

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Transition Emerging Credits is an actively managed fund that invests in corporate bonds in emerging markets. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. At least 50% is invested in Transition-related Investments contributing to the goals of the Paris Agreement and/or Transition-related Investments with an Environmental and/or Social objective.
- 2. The Sub-fund invests a minimum of 15% in green, social, sustainability, and/or sustainability-linked honds
- 3. Other investments in corporate bonds (i.e., next to the Transition-related investments) are invested in companies with a positive or neutral SDG score
- 4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.
- 5. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.
- 6. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 7. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 5% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

23 September 2024 1297 / 1476

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents, government debt, and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

companies, e.g. for a transition to a transition to a

) 1

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of
 investee
 companies.

23 September 2024 1298 / 1476

underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green Bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸⁷?

Yes

In fossil gas

In nuclear energy

≭ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

23 September 2024 1299 / 1476

⁸⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

0%. The Sub-fund does not intend to make investments in transitional and enabling activities as defined under the EU Taxonomy. It cannot be excluded that among the Sub-fund's holdings certain investments, among which the investments in transition assets, are transitional or enabling activities as defined under the EU Taxonomy. The Sub-fund will report on these investments in the periodic disclosures.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%. While investments in transition assets may have an environmental objective, these are not per se sustainable investments.

What is the minimum share of socially sustainable investments?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, government bonds, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

S2978D-202409

23 September 2024 1300 / 1476

not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Not applicable.

governance practices.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Yield Bonds

Sustainable investment objective

Does this financial product have a sustainable investment objective?				
•	× Yes	• No		
×	It will make a minimum of sustainable investments with an environmental objective: 50% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective		
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments		

What is the sustainable investment objective of this financial product?

The sustainable investments of the Sub-fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris Agreement to keep the maximum global temperature rise well-below 2°C.

23 September 2024 1302 / 1476

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund also promotes investment in green, social, sustainability and/or sustainability-linked bonds used to finance environmental and social projects.

The sustainable investments made by the Sub-fund will contribute partly to the environmental objective of Climate Mitigation under the Taxonomy regulation.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The Sub-fund's weighted carbon footprint compared to the Paris-Aligned Benchmark.
- 2. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.
- 3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 4. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris-Aligned Benchmark follow eligibility requirements as per Article 12 of the EU regulation EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

All sustainable investments are constituents of Solactive Global High Yield Corporate PAB Select Indexor follow the benchmark methodology. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses performance on all mandatory PAI indicators on a regular basis. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

23 September 2024 1303 / 1476

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as the methodology of the benchmark provider.

environmental,

Does this financial product consider principal adverse impacts on sustainability factors?

★ Yes, ____

Yes, the Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered via the applied normative and activity-based exclusions:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this
 PAI is currently restricted to applying exclusions to palm oil producing companies and for any
 breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to
 biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Via the carbon footprint performance target of the Sub-fund, the PAI on Carbon footprint (PAI 2, Table 1) is considered via the Paris-Aligned Benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this
 PAI is currently restricted to applying exclusions to palm oil producing companies and for any
 breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to
 biodiversity.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Climate Global High Yield Bonds is an actively managed fund that invests mainly in high yield corporate bonds all around the world. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustain-ability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- The Sub-fund's weighted carbon footprint is better than the Paris-Aligned Benchmark.
- 2. The Sub-fund invests a minimum of 2% in green, social, sustainability, and/or sustainability-linked bonds.
- 3. The Sub-fund does not invest in activities that are excluded on the basis of Article 12 of the EU regulation Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks as applicable. In addition, the Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Subfund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

23 September 2024 1305 / 1476

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- reflecting the share of revenue from green activities of investee companies
- capital
 expenditure
 (CapEx) showing
 the green
 investments
 made by investee
 companies, e.g.
 for a transition to
 a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 50% sustainable investments with an environmental objective, measured by the by holdings that are part of the Paris-Aligned Benchmark. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging as well as liquidity management. This includes the usage of derivatives to manage currency and duration exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. Derivatives linked to corporate exposure are not allowed.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to contribute to all environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. Given the current commitment, the expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1306 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling
activities directly
enable other
activities to make
a substantial
contribution to an
environmental
objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸⁸?

Yes:

In fossil gas

In nuclear energy

≭ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund makes sustainable investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commit to a minimum share of sustainable investments of 50% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies with a low carbon footprint, in line with a low carbon scenario. However, some of these companies with a low carbon footprint may not be exposed to activities that are eligible under the EU Taxonomy.

In addition, Green Bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, however the Sub-fund does not intend to set a minimum target. The sum of socially sustainable investments and sustainable

23 September 2024 1307 / 1476

⁸⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are
sustainable
investments with an
environmental
objective that do
not take into
account the criteria
for environmentally
sustainable
economic activities
under the EU
Taxonomy.

investments with an environmental objective will always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Social, sustainability or sustainability-linked bonds may invest (part of) the proceeds in economic activities that contribute to a social objective. In addition, it could be possible that some companies contribute to social objectives either by being a part of the Paris-Aligned Benchmark or having a positive score via Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Yes, the Sub-fund follows the Solactive Global High Yield Corporate PAB Select Index as a reference index to meet the carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The reference index is aligned with the carbon reduction objective of the Sub-fund by applying a methodology with clearly defined rules for evaluating securities on their carbon footprint. The methodology of the reference index is designed in accordance with the requirements of point (d) of

23 September 2024 1308 / 1476

Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817. This means that amongst others for the corporate bond part, the reference index is aligned with those criteria set out in Article 12 of the EU Climate Transition Benchmarks, EU Parisaligned Benchmarks and sustainability-related disclosures for benchmarks. The Sub-fund also applies the aforementioned exclusion criteria, and the Sub-fund's overall weighted carbon footprint score in each of the government part and the corporate part is always equal to or better than the respective part of the Solactive Global High Yield Corporate PAB Select Index.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The methodology of the reference index follows rebalancing rules on a monthly basis for index eligibility and rebalances on a six month basis for decarbonization, which ensures alignment with the investment strategy and objective of the Sub-fund. The index uses data sourced from Institutional Shareholder Services Inc for corporate issuers and from the Emissions Database for Global Atmospheric Research (EDGAR) for sovereign issuers.

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

How does the designated index differ from a relevant broad market index?

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on decarbonization and on greenhouse gas emission reduction and related exclusions.

Where can the methodology used for the calculation of the designated index be found?

The index methodology can be found on the relevant webpages by the index provider: https://www.solactive.com/indices/

Bonds

q) Robeco High Income Green Bonds

Product name: Robeco High Income Green

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 213800PLNWH9PVP39A71

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation

practices.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Does this financial product have a sustainable investment objective?				
•• X Yes	• No			
It will make a minimum of sustainable investments with an environmental objective: 80% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective			
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments			

23 September 2024 1310 / 1476

Sustainability indicators measure how the sustainable objectives of this financial product

are attained.

What is the sustainable investment objective of this financial product?

The Sub-fund invests predominantly in Green Bonds, as well as in social, sustainability, and sustainability-linked bonds. With these investments, the Sub-fund finances investments that can contribute to environmental goals like:

- Climate change mitigation and adaptation,
- Sustainable use and protection of water and marine resources,
- Transition to a circular economy,
- Waste prevention and recycling,
- · Pollution prevention, and
- Protection of healthy ecosystems.

There is no reference benchmark designated for the purpose of attaining the sustainable objectives promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of the Sub-fund invested in Green Bonds.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainable Bonds, significant harm is avoided by the application of Green Bonds Principles and their respective Bonds principles.

For a large share of Green, Social and Sustainable bonds, Robeco adds an extra assessment on sustainability factors by applying Robeco's Green Bond Framework or Social Bond Framework.

Via these frameworks, the following adverse impacts are directly considered:

- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

For Green Bonds, there is no disclosures on GHG emissions. Yet, avoided emissions (scope 4 emissions) are considered. For Social bonds, Robeco considers board gender diversity (Table 1, PAI 13) depending on whether the use of proceeds of the social bond will tackle gender diversity issues.

Lastly, Robeco's SDG Framework is considered for the analysis of green, social, sustainability and sustainability-linked bonds. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included

23 September 2024 1311 / 1476

in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Principal adverse

negative impacts of

factors relating to

social and employee

matters, respect for

human rights, anticorruption and anti-

bribery matters.

environmental,

impacts are the most significant

investment

decisions on sustainability

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, green, social and sustainable bonds are assessed via Robeco's Green Bond Framework and/ or Social Framework, as well as via Robeco's SDG Framework. These framework directly and indirectly assess PAI indicators

Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website.

What investment strategy does this financial product follow?

Robeco High Income Green Bonds is an actively managed sub-fund that invests in Green Bonds globally issued by corporates, governments, government-related agencies. The selection of these

23 September 2024 1312 / 1476

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance. bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Other bonds that can be invested in are either social bonds, sustainable bonds, and sustainability-linked bonds. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- 1. The Sub-fund allocates a minimum 80% of the bond exposure ex government bonds in the Green Bonds based on external vendor data or the internally developed framework by Robeco.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 80% sustainable investments with an environmental objective, defined as investments in green or sustainability bonds. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 1313 / 1476

Taxonomy-aligned activities are expressed as a share of:

- reflecting the share of revenue from green activities of investee companies
- capital
 expenditure
 (CapEx) showing
 the green
 investments
 made by investee
 companies, e.g.
 for a transition to
 a green economy.
- operational
 expenditure
 (OpEx) reflecting
 green operational
 activities of
 investee
 companies.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

No

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to all environmental objectives under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green Bonds improves and stabilizes.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds can differ.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸⁹?

Yes:

In fossil gas

In nuclear energy

23 September 2024 1314 / 1476

⁸⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are
sustainable
investments with an
environmental
objective that do
not take into
account the criteria
for environmentally
sustainable
economic activities
under the EU
Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green Bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. The Sub-fund commits to a minimum share of sustainable investments of 80% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to at least the Sub-fund's minimum proportion of sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. We do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific social investment objective. The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and

23 September 2024 1315 / 1476

equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective. No the Sub-fund does not designate a reference benchmark since an appropriate index is not available to solely capture the Green Bbonds and other use-of-proceeds bonds across the geography, investment segments as designed in the strategy. The sustainable objective of the Sub-fund is met by investing in Green Bonds which help finance/re-finance projects that have environmental goals clearly highlighted in accordance with ICMA principles.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

1. The Sub-fund promotes investment in green, social, sustainability and/or sustainability-linked bonds used to finance environmental and social projects.

The Sub-fund has the following E/S characteristics for investments in corporate bonds:

- 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
- 2. The Sub-fund promotes a contribution to the UN Sustainable Development Goals (SDGs).
- 3. The Sub-fund promotes having a lower carbon footprint than that of the general market index referred to in Appendix VI Benchmarks (the "General Market Index").
- 4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
- 5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.

The Sub-fund has the following E/S characteristics for investments in government bonds:

- 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
- The Sub-fund promotes investment in countries that perform well on the Robeco Country Sustainability Ranking by setting a minimum eligibility threshold. The Robeco Country Sustainability Ranking incorporates a wide range of factors such as aging, corruption, social unrest, political risks and environmental risks.
- 3. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.
- 4. The Sub-fund promotes having a lower carbon footprint than that of the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

23 September 2024 1318 / 1476

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the corporate bonds:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The proportion of Sub-fund investments that hold a positive SDG score and the weighted average SDG score versus the General Market Index, the SDG score is based on the internally developed SDG Framework.
- 3. The Sub-fund's weighted corporate carbon footprint versus the footprint of the General Market Index.
- 4. The % of holdings with an elevated sustainability risk profile.
- 5. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the government bonds:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of the Exclusion policy.
- 2. The minimum absolute and weighted average score on Robeco's Country Sustainable Ranking
- 3. The % of investments excluded from the WGI Control of Corruption ranking.
- 4. The Sub-fund's weighted government carbon footprint versus the footprint of the General Market Index

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

A portion of the sustainable investments are green, social, sustainability and sustainability-linked bonds, and therefore contribute to the environmental objectives under EU Taxonomy. The portion of corporate sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

For sustainable investments that are either green, social or sustainability bonds, significant harm is avoided by the application of the Robeco's green, social or sustainability bond eligibility frameworks.

For corporate investments, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant

23 September 2024 1319 / 1476

impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either green, social or sustainability bonds, significant harm is avoided by the application of the Robeco's green, social or sustainability bond eligibility framework. As a result, the following adverse impacts are taken into account:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)
- Table 2, PAI 17 (Share of bonds not certified as green under a future EU act setting up an EU Green Bond Standard)

For Corporates, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

For the corporate investments, the sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

To sovereigns and supranationals, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are not applicable.

23 September 2024 1320 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

As part of Robeco's Country Sustainability ranking, used for the fundamental analysis of bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds not certified as green under a future EU act setting up an EU Green Bond Standard)
- Tabel 3, PAI 21 (Control of Corruption)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Table 1, PAI 15 (GHG intensity), via Robeco's engagement program

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Global Bonds is an actively managed fund that invests globally in bonds and other marketable debt securities and instruments issued or guaranteed by OECD member states and by companies based

23 September 2024 1321 / 1476

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance. in OECD countries. The Sub-fund also has the flexibility to invest in Emerging Debt. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and country-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final guestion of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

1. The Sub-fund invests a minimum of 20% in green, social, sustainability, and/or sustainability-linked bonds

The Sub-fund has the following binding elements to attain the E/S characteristics for the corporate bonds:

- 1. The Sub-fund does not invest in activities that are excluded on the basis of Article 12 of the EU regulation Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks as applicable. In addition, the Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund's investments consist of a minimum of 30% of corporate and government related bonds, including the EU, that have a SDG rating of 1 or higher and the average corporate SDG rating is better than the average corporate SDG of the General Market Index.
- 3. The Corporate carbon footprint is better than the weighted average footprint of the General Market Index.
- 4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- 5. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.

The Sub-fund has the following binding elements to attain the E/S characteristics for the government bonds:

The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

23 September 2024 1322 / 1476

- 2. The Sub-fund's portfolio has a minimum score of 4.5 on the Robeco Country Sustainability Ranking and the weighted average score is better than the weighted average score of the General Market Index.
- 3. The Sub-fund excludes sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.
- 4. The Sub-fund's weighted government carbon footprint versus the footprint of the General Market Index.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry- established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

sound management

structures, employee

remuneration of staff and tax compliance.

practices include

relations,

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The Sub-fund does not specifically target a minimum percentage of its sustainable investments with an social objective but it cannot be ruled out that sustainable investments may include those with an social objective. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

23 September 2024 1323 / 1476

Taxonomy-aligned activities are expressed as a share of:

- reflecting the share of revenue from green activities of investee companies
- capital
 expenditure
 (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. Given the lack of data on the EU Taxonomy for Green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹⁰?

Yes

In fossil gas In nuclear energy

* No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and

23 September 2024 1324 / 1476

⁹⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green Bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, however the Sub-fund does not intend to set a minimum target.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective, however the Sub-fund does not intend to set a minimum target. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management

23 September 2024 1325 / 1476

and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Not applicable.

It will make a minimum of sustainable investments with a	It promotes E/S characteristics, but will not make any sustainable investments			

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are

attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow

23 September 2024 1327 / 1476

- applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
- 2. The Sub-fund promotes investment in countries that perform well on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates around 50 ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
- 3. The Sub-fund has a lower carbon footprint than the General Market Index (i.e. JPM GBI Global Index IG).

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The Sub-fund's portfolio has a better average ESG score on Robeco's Country Sustainability Ranking as compared to the General Market Index
- 3. The weighted carbon emissions per capita as compared to the General Market Index.
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The Sub-fund does not intend to make investments considered as sustainable investments as defined under the SFDR Regulation (EU) 2019/2088.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The Sub-fund does not intend to make investments considered as sustainable investments as defined under the SFDR Regulation (EU) 2019/2088.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

23 September 2024 1328 / 1476

Does this financial product consider principal adverse impacts on sustainability factors?

★ Yes, ____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

As part of Robeco's Country Sustainability ranking, used for the fundamental analysis of bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)
- Tabel 3, PAI 21 (Control of Corruption)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Table 1, PAI 15 (GHG intensity), via Robeco's engagement program

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco QI Global Dynamic Duration is an actively managed Sub-fund that invests worldwide in government bonds with investment grade quality. The selection of these bonds is based on quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil

fuels. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

- 2. The Sub-fund's weighted average Robeco Country Sustainability Ranking score is better than that of the General Market Index.
- 3. The Sub-fund's weighted carbon emissions per capita is better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

The Sub-fund invests in government bonds, to which Robeco's Good Governance policy is not applicable. Robeco does have a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products.

Good governance

compliance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- expenditure (OpEx)
 reflecting green
 operational activities
 of investee
 companies.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund does not plan to make sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

23 September 2024 1330 / 1476

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy for Green Bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures, based on use of proceeds for Green Bonds. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁹¹

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available

Yes		
	In fossil gas	In nuclear energy

S2978D-202409

⁹¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

and among others have greenhouse gas emission levels corresponding to the best performance.

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

0%.

What is the minimum share of socially sustainable investments?

0%.

are sustainable investments with an

account the criteria for

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-

23 September 2024 1332 / 1476

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

23 September 2024 1334 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- 1. The Sub-fund promotes having a weighted average Robeco Country Sustainability Ranking score that is better than that of the general market index referred to in Appendix VI Benchmarks (the "General Market Index").
- 2. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 4. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
- 5. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The Sub-fund's weighted average Robeco Country Sustainability Ranking score compared to the General Market Index.
- 2. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.
- 3. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises.
- 4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 5. The % of investments excluded from the Worldwide Governance Indicators (WGI) Control of Corruption ranking.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The portion of the sustainable investments are green, social, sustainability and sustainability-linked bonds, and therefore contribute to the environmental or social objectives under EU Taxonomy. The Subfund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

23 September 2024 1335 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. The portion of the sustainable investments are green, social, sustainability and sustainability-linked bonds. The Subfund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive company SDG scores (+1, +2, +3) are regarded as sustainable investments.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impact, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments linked to companies are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

23 September 2024 1336 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Tu

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, as part of Robeco's Country Sustainability ranking, used for the fundamental analysis of sovereign bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)
- Table 3, PAI 21 (Control of Corruption)

Green, social and sustainable bonds are assessed via Robeco's Green Bond Framework and Social Framework, as well as via Robeco's SDG Framework. These framework directly and indirectly assess PAI indicators.

Robeco's SDG Framework assesses issuer's positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens issuers on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its

significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Principal adverse

impacts are the most

23 September 2024 1337 / 1476

investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Emerging Markets Bonds is an actively managed fund that predominantly invests in Hard currency bonds issued by emerging market countries. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- The Sub-fund's weighted average Robeco Country Sustainability Ranking score is better than that
 of the General Market Index
- 2. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.
- The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC
 or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms
 will be excluded from the investment universe.
- 4. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 5. The Sub-fund excludes sovereign bonds issued by the bottom 15% countries of the Worldwide Governance Indicators (WGI) Control of Corruption ranking.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Good governance practices include sound management structures, employee

23 September 2024 1338 / 1476

relations, remuneration of staff and tax compliance. recognized industry- established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund, which aims to invest at least 5% of its assets in sustainable investments, defined as Green, Social or Sustainability bonds. The investments in the category "Other", estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- reflecting the share of revenue from green activities of investee companies
- expenditure
 (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure
 (OpEx) reflecting green
 operational activities of investee companies.

23 September 2024 1339 / 1476

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green Bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹²?

Yes

In fossil gas

In nuclear energy

* No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

23 September 2024 1340 / 1476

⁹² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green Bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 5% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 5% sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

23 September 2024 1341 / 1476

23 September 2024 1343 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- I. The Sub-fund promotes having a weighted average Robeco Country Sustainability Ranking score that is better than that of the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
- 2. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 4. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
- 5. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The Sub-fund's weighted average Robeco Country Sustainability Ranking score compared to the General Market Index.
- 2. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.
- 3. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises.
- 4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 5. The % of investments excluded from the Worldwide Governance Indicators (WGI) Control of Corruption ranking.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The portion of the sustainable investments are green, social, sustainability and sustainability-linked bonds, and therefore contribute to the environmental or social objectives under EU Taxonomy. The Subfund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

23 September 2024 1344 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. The portion of the sustainable investments are green, social, sustainability and sustainability-linked bonds. The Subfund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive company SDG scores (+1, +2, +3) are regarded as sustainable investments.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impact, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments linked to companies are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy. Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

23 September 2024 1345 / 1476

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, as part of Robeco's Country Sustainability ranking, used for the fundamental analysis of sovereign bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)
- Table 3, PAI 21 (Control of Corruption)

Green, social and sustainable bonds are assessed via Robeco's Green Bond Framework and Social Framework, as well as via Robeco's SDG Framework. These framework directly and indirectly assess PAI indicators.

Robeco's SDG Framework assesses issuer's positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens issuers on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

investment decisions

What investment strategy does this financial product follow?

Robeco Emerging Markets Bonds Local Currency is an actively managed fund that predominantly invests in Local currency bonds issued by emerging market countries. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in

23 September 2024 1346 / 1476

objectives and risk tolerance.

the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- The Sub-fund's weighted average Robeco Country Sustainability Ranking score is better than that
 of the General Market Index
- 2. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked honds
- 3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.
- 4. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 5. The Sub-fund excludes sovereign bonds issued by the bottom 15% countries of the Worldwide Governance Indicators (WGI) Control of Corruption ranking.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry- established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

23 September 2024 1347 / 1476

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- expenditure
 (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure
 (OpEx) reflecting
 green
 operational
 activities of
 investee
 companies.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund, which aims to invest at least 5% of its assets in sustainable investments, defined as Green, Social or Sustainability bonds. The investments in the category "Other", estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green Bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-

23 September 2024 1348 / 1476

alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹³?

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green Bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 5% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 1349 / 1476

S2978D-202409

⁹³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 5% sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

23 September 2024 1351 / 1476

5. REGIONAL BOND SUB-FUNDS

a) Robeco Euro Government Bonds

Product name: Robeco Euro Government

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 2138004UVBQIDUAW9R66

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Bonds

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?				
•	Yes	● ○ 🗶 No		
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective		
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments		

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

23 September 2024 1352 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
- The Sub-fund promotes investment in countries that perform well on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates a wide range of ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
- 3. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.
- 4. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The weighted average score on Robeco's Country Sustainability Ranking.
- 3. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.
- 4. The % of investments excluded based on the Worldwide Governance Indicators (WGI) Control of Corruption ranking.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The Sub-fund invests in Green bonds, Social bonds, Sustainable bonds and/or Sustainability-linked bonds used to finance environmental and social projects. A description of Green bonds, Social Bonds, Sustainable bonds and Sustainability-linked bonds is included in the Glossary of Defined Terms section of this Prospectus.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by applying Robeco's ESG bond eligibility frameworks in the selection process. Robeco's ESG bond eligibility frameworks require that international norms related to social and governance issues are met. Under the frameworks, ESG bond investments are assessed on (i) social safeguards – the issuer respects international Human and Labor Rights, (ii) controversial behavior – the issuer is not in violation of the UN Global Compact, and (iii) sanctions – the issuer is not subject to international sanctions.

To identify whether an issuer is involved in a controversy, ratings and data from external providers are used to aid our in-house monitoring. If a controversy is found, the analyst determines whether this has

23 September 2024 1353 / 1476

material impacts on the ESG bond analysis and/or the SDG score. If the controversy is deemed material, the issuer receives a negative SDG Score and the investment is not sustainable.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social, Sustainability or Sustainability-linked bonds, significant harm is avoided by the application of Robeco's green, social, sustainability or sustainability-linked bond eligibility framework. As a result, the following adverse impacts are taken into account during the investment analysis as part of Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)
- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)

As a first step, ESG bonds are assessed in their alignment with standards or principles that exist in the market, such as the International Capital Market Association (ICMA) Green bond principles, the Climate bond initiative (CBI) or international standards as the EU Green Bond Standard (Table 2, PAI 17). As a second step, amongst others, GHG intensity (Table 1, PAI 15) is assessed in the project evaluation that considers the allocation of proceeds. In addition, the ESG bonds are assessed on their compliance with international norms related to social and governance issues (in relation to Table 1, PAI 16). A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As the Sub-fund invest in sovereigns and supranationals, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

•	Yes,	
~	103,_	

23 September 2024 1354 / 1476

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered: As part of Country Sustainability ranking, used for the fundamental analysis of bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)
- Table 3, PAI 21 (Control of Corruption)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Table 1, PAI 15 (GHG intensity), via Robeco's engagement program

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Euro Government Bonds is an actively managed fund that invests predominantly in euro government bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies country-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Subfund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund's portfolio has a minimum weighted average score of at least 6.5 on Robeco's Country Sustainability Ranking.
- 3. The Sub-fund invests a minimum of 10% in green, social, sustainability and/or sustainability-linked bonds.

23 September 2024 1355 / 1476

- 4. The Sub-fund excludes sovereign bonds issued by the bottom 15% of the Worldwide Governance Indicators (WGI) Control of Corruption ranking.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 10% sustainable investments, measured by the investments in Green, or Sustainable Bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 1356 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of
 investee
 companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the environmental objectives under the EU Taxonomy, given the planned investments in Green bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy for Green bonds improves and stabilizes.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures, based on use of proceeds. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1357 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹⁴?

Ye

In fossil gas In nuclear energy

≭ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, however the Sub-fund does not intend to set a minimum target. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 10% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 1358 / 1476

⁹⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective, however the Sub-fund does not intend to set a minimum target. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Not applicable.

b) Robeco Euro Credit Bonds

Product name: Robeco Euro Credit Bonds

It will make a minimum of

social objective: ___ %

sustainable investments with a

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 213800CVNA3PA3B0NW52

It promotes E/S characteristics, but will not

make any sustainable investments

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental or
social objective,
provided that the
investment does not
significantly harm
any environmental or
social objective and
that the investee
companies follow

good governance

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics Does this financial product have a sustainable investment objective? It will make a minimum of It promotes Environmental/Social (E/S) **characteristics** and while it does not have as sustainable investments with an its objective a sustainable investment, it will environmental objective: % have a minimum proportion of 30% of in economic activities that sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in economic activities that qualify as Taxonomy environmentally sustainable under the EU in economic activities that do not qualify as environmentally Taxonomy sustainable under the EU with an environmental objective in economic activities that do not qualify as Taxonomy environmentally sustainable under the EU Taxonomy with a social objective

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

23 September 2024 1361 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- 1. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
- 3. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The % of holdings with an elevated sustainability risk profile.
- 4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

23 September 2024 1362 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility framework.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1363 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

factors relating to

Does this financial product consider principal adverse impacts on sustainability factors?

•	Yes,	
•	103,_	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and quidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

23 September 2024

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Euro Credit Bonds is an actively managed fund that provides a diversified exposure to the euro investment grade credit market. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- 4. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.

23 September 2024 1365 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include

relations.

sound management

structures, employee

remuneration of staff and tax compliance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

23 September 2024 1366 / 1476

activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green Bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹⁵?

Yes

In fossil gas

In nuclear energy

energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

23 September 2024 1367 / 1476

To comply with the

EU Taxonomy, the

criteria for fossil gas include

limitations on emissions and

switching to

⁹⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear

renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced

23 September 2024 1368 / 1476

inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

What environmental and/or social characteristics are promoted by this financial product?

1. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

23 September 2024 1370 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics for investments in corporate bonds:

- 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
- The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.

The Sub-fund has the following E/S characteristics for investments in government bonds:

- 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
- 2. The Sub-fund promotes investment in countries that perform well on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates a wide range of ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
- 3. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

1. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the corporate bonds:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The % of corporate holdings with an elevated sustainability risk profile.
- The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the government bonds:

- 1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The minimum weighted average score on Robeco's Country Sustainable Ranking.

23 September 2024 1371 / 1476

3. The % of investments excluded from the Worldwide Governance Indicators (WGI) - Control of Corruption ranking.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The portion of the sustainable investments are green, social, sustainability and sustainability-linked bonds, and therefore contribute to the environmental objectives under EU Taxonomy. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks.

For corporate investments, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility framework. As a result, the following adverse impacts are taken into account:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)
- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)

For corporates, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

23 September 2024 1372 / 1476

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

For the corporate investments, the sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

In addition, the Sub-fund invest in sovereigns and supranationals, for which sustainable investments defined as green, social, sustainability and/or sustainability-linked bonds from these issuers are not aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

23 September 2024 1373 / 1476

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and anti-

bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

As part of Country Sustainability ranking, used for the fundamental analysis of bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)
- Table 3, PAI 21 (Control of Corruption)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Table 1, PAI 15 (GHG intensity), via Robeco's engagement program

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco All Strategy Euro Bonds is an actively managed fund that invests primarily in euro-denominated government and non-government bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and country-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

23 September 2024 1374 / 1476

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - 1. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.

The Sub-fund has the following binding elements to attain the E/S characteristics for the corporate bonds:

- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- 3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

The Sub-fund has the following binding elements to attain the E/S characteristics for government bonds:

- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Subfund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund's portfolio has a minimum weighted average score of at least 6 on Robeco's Country Sustainability Ranking.
- 3. The Sub-fund excludes sovereign bonds issued by the bottom 15% of the Worldwide Governance Indicators (WGI) Control of Corruption ranking.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely

Good governance practices include sound management structures, employee relations,

23 September 2024 1375 / 1476

remuneration of staff and tax compliance.

recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- expenditure (OpEx)
 reflecting green
 operational
 activities of
 investee
 companies.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 5% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. As and when the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

23 September 2024 1376 / 1476

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹⁶?

Vρ

In fossil gas

In nuclear energy

× No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

0%.

23 September 2024 1377 / 1476

⁹⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, however the Sub-fund does not intend to set a minimum target. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 5% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective, however the Sub-fund does not intend to set a minimum target. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Not applicable.

23 September 2024 1378 / 1476

23 September 2024 1379 / 1476

d) Robeco European High Yield Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental or
social objective,
provided that the
investment does not
significantly harm
any environmental or
social objective and
that the investee
companies follow
good governance

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco European High Yield Legal entity identifier: 21380033AH4QAGYE2R38 Bonds

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

23 September 2024 1380 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
- 4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The % of holdings with an elevated sustainability risk profile.
- 4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

23 September 2024 1381 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1382 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 1383 / 1476

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco European High Yield Bonds is an actively managed fund that invests in bonds with a sub-investment grade rating, issued primarily by European and US issuers. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- 4. The Sub-fund invests a minimum of 2% in green, social, sustainability, and/or sustainability-linked bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

23 September 2024 1384 / 1476

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docurobeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance the exclusion list that can https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

- #1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- #2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Asset allocation describes the share of investments in

specific assets.

of:

Taxonomy-aligned activities are expressed as a share

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the

23 September 2024 1385 / 1476

underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green Bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

safety and waste management rules.

Transitional activities are activities for which low-carbon alternatives are not yet available and

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹⁷?

Yes

In fossil gas

In nuclear energy

≭ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

23 September 2024 1386 / 1476

⁹⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

S2978D-202409

23 September 2024 1387 / 1476

Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Not applicable.

e) **Robeco Transition Asian Bonds**

Product name: Robeco Transition Asian

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Legal entity identifier: 21380096HMIZ4YU8CM47

23 September 2024 1389 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- 1. The Sub-fund promotes Transition-related Investments contributing to the goals of the Paris Agreement and/or Transition-related Investments with an Environmental and/or Social objective.
- 2. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.
- 3. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals (SDGs).
- 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 5. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies.
- 6. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The proportion of Transition-related Investments contributing to the goals of the Paris Agreement and Transition-related Investments with an Environmental and/or Social objective.
- 2. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.
- 3. The proportion of companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
- 4. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises.
- 5. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 6. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

23 September 2024 1390 / 1476

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1391 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse

on sustainability factors relating to

and employee

Does this financial product consider principal adverse impacts on sustainability factors?

×	Yes,	

No

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30

April at the Sub-fund page highlighted in final section of this document.

23 September 2024 1392 / 1476

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Transition Asian Bonds is an actively managed fund that invests in corporate and government bonds in Asia. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. At least 50% is invested in Transition-related Investments contributing to the goals of the Paris Agreement and/or Transition-related Investments with an Environmental and/or Social objective.
- 2. The Sub-fund invests a minimum of 15% in green, social, sustainability, and/or sustainability-linked honds
- 3. Other investments in corporate bonds (i.e., next to the Transition-related Investments) are invested in companies with a positive or neutral SDG score
- 4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.
- 5. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 6. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 5% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

23 September 2024 1393 / 1476

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents, government debt and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

- **#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

characteristics promoted by the financial product?

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the

underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. At this moment, the expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹⁸?

Yes

In fossil gas In nuclear energy

≭ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

S2978D-202409

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%. The Sub-fund does not intend to make investments in transitional and enabling activities as defined under the EU Taxonomy. It cannot be excluded that among the Sub-fund's holdings certain investments,

among which the investments in transition assets, are transitional or enabling activities as defined under the EU Taxonomy. The Sub-fund will report on these investments in the periodic disclosures.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%. While investments in transition assets may have an environmental objective, these are not per se sustainable investments.

What is the minimum share of socially sustainable investments?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, government bonds, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment

social objective: ___%

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 213800MQYJBFHGNZW597

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental or
social objective,
provided that the
investment does not
significantly harm
any environmental or
social objective and
that the investee
companies follow
good governance

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics Does this financial product have a sustainable investment objective? It will make a minimum of It promotes Environmental/Social (E/S) **characteristics** and while it does not have as sustainable investments with an its objective a sustainable investment, it will environmental objective: % have a minimum proportion of 70% of in economic activities that sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in economic activities that qualify as Taxonomy environmentally sustainable under the EU in economic activities that do not qualify as environmentally Taxonomy sustainable under the EU with an environmental objective in economic activities that do not qualify as Taxonomy environmentally sustainable under the EU Taxonomy with a social objective It will make a minimum of It promotes E/S characteristics, but will not sustainable investments with a make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

23 September 2024 1398 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- 1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals
- 2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The number of companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition,

23 September 2024 1399 / 1476

sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

23 September 2024 1400 / 1476

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Euro SDG Credits is an actively managed fund and provides a diversified exposure to the Euro investment grade credit market. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund is invested in bonds that hold a positive or neutral SDG score.
- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has

23 September 2024 1401 / 1476

0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

- The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC
 or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms
 will be excluded from the investment universe.
- 4. The Sub-fund invests a minimum of 10% in green, social, sustainability, and/or sustainability-linked bonds.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 70% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the

share of investments in specific assets.

23 September 2024 1402 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- expenditure (OpEx)
 reflecting green
 operational
 activities of
 investee
 companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green Bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1403 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹⁹?

Yes

In fossil gas In nuclear energy

* No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 70% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

23 September 2024 1404 / 1476

⁹⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

23 September 2024 1405 / 1476

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

23 September 2024 1407 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
- 4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The % of holdings with an elevated sustainability risk profile.
- 4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines

23 September 2024 1408 / 1476

for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

23 September 2024 1409 / 1476

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and anti-

bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Financial Institutions Bonds is an actively managed fund that mainly invests in subordinated euro-denominated bonds issued by financial institutions. The selection of these bonds is based on

23 September 2024 1410 / 1476

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance. fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- 4. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-qood-qovernance-policy.pdf. Additionally, the companies that do not pass the good governance

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

23 September 2024 1411 / 1476

test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- $\hbox{- The sub-category \#1A Sustainable covers sustainable investments with environmental or social objectives.}\\$
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green Bonds improves and stabilises.

Taxonomy-aligned activities are expressed as a share of:

Asset allocation

describes the

investments in

specific assets.

share of

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational

which low-carbon

alternatives are not yet available and among others have greenhouse gas The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹⁰⁰?

Yes

In fossil gas In nuclear energy

* No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on

23 September 2024 1413 / 1476

_

¹⁰⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

are sustainable investments with an

environmental

environmentally

EU Taxonomy.

criteria for

objective that do not

take into account the

sustainable economic

activities under the

What is the minimum share of socially sustainable investments?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or

23 September 2024 1414 / 1476

social characteristics that they promote.

h) Robeco US Green Bonds

Product name: Robeco US Green Bonds

social objective: %

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Legal entity identifier: 213800N8SFP1LXXF4380

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a

governance

practices.

list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective Does this financial product have a sustainable investment objective? It promotes Environmental/Social (E/S) It will make a minimum of **characteristics** and while it does not have as sustainable investments with an its objective a sustainable investment, it will environmental objective: 70% have a minimum proportion of % of in economic activities that sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in economic activities that qualify as Taxonomy environmentally sustainable under the EU in economic activities that do not qualify as environmentally Taxonomy sustainable under the EU with an environmental objective in economic activities that do not qualify as Taxonomy environmentally sustainable under the EU Taxonomy with a social objective It will make a minimum of It promotes E/S characteristics, but will not sustainable investments with a make any sustainable investments

What is the sustainable investment objective of this financial product?

The Sub-fund invests predominantly in Green Bonds, as well as in social and sustainable bonds.

23 September 2024 1416 / 1476

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

With these investments, The Sub-fund finances investments that contribute to environmental goals like:

- Climate change mitigation and adaptation
- Sustainable use and protection of water and marine resources
- Transition to a circular economy
- Waste prevention and recycling
- Pollution prevention
- Protection of healthy ecosystems.

There is a reference benchmark designated for the purpose of attaining the sustainable objectives promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The % of the Sub-fund invested in Green Bonds.
- 2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 3. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainable Bonds, significant harm is avoided by the application of Green Bonds Principles.

For a large share of Green, Social and Sustainable bonds, Robeco adds an extra assessment on sustainability factors by applying Robeco's Green Bonds Framework or Social Bond Framework.

Via these frameworks, the following adverse impacts are directly considered:

- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

For Green bonds, there is no disclosures on GHG emissions. Yet, avoided emissions (scope 4 emissions) are considered. For Social bonds, Robeco considers board gender diversity (Table 1, PAI 13) depending on whether the use of proceeds of the social bond will tackle gender diversity issues.

Lastly, Robeco's SDG Framework is considered for the analysis of green, social or sustainable bonds. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

23 September 2024 1417 / 1476

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Principal adverse

negative impacts of

factors relating to

social and employee

matters, respect for

human rights, anticorruption and anti-

bribery matters.

environmental,

impacts are the most significant

investment

decisions on sustainability

Does this financial product consider principal adverse impacts on sustainability factors?

* Yes, ____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, green, social and sustainable bonds are assessed via Robeco's Green Bond Framework and Social Framework, as well as via Robeco's SDG Framework. These framework directly and indirectly assess PAI indicators

Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco US Green Bonds is an actively managed fund that invests in USD-denominated Green Bonds issued by governments, government-related agencies and corporates. Other bonds invested in are either social bonds, sustainable bonds, or sustainability-linked bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal

The investment strategy guides investment decisions based on factors such as investment

23 September 2024 1418 / 1476

objectives and risk tolerance.

Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- 1. The Sub-fund allocates a minimum 80% of the bond exposure ex government bonds in Green Bonds based on external vendor data or the internally developed framework by Robeco.
- 2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 70% sustainable investments with an environmental objective, defined as investments in Green, Social or Sustainable bonds. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 1419 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- expenditure
 (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure
 (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging as well as liquidity management. This includes the usage of derivatives to manage currency and duration exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. Derivatives linked to corporate exposure are not allowed.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to all environmental objectives under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green bonds improves and stabilizes.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in Green, Social and Sustainable bonds and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power

Does the financial product invest in fossil gas and/or nuclear energy relate
activities that comply with the EU Taxonomy ¹⁰¹ ?

Yes:

In fossil gas In nuclear energy

* No

23 September 2024 1420 / 1476

¹⁰¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling

objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. The Sub-fund commits to a minimum share of sustainable investments of 70% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. We do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does have a specific social investment objective. The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

23 September 2024 1421 / 1476

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective. Yes, the Sub-fund uses the Bloomberg MSCI US Green Bond Index as a reference index to meet the sustainable investment objective of the Sub-fund.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Given that sustainable investment objective of the Sub-fund is to finance investment in Green Bonds, the reference index is aligned with such objective of the Sub-fund by applying clearly defined rules for evaluating Green Bonds composition in the index.

Bloomberg MSCI evaluates Green Bonds to ensure adherence to established Green Bond Principles (GBP) and to examine bonds by their environmental use of proceeds. The index provider follows an eligibility criteria along four dimensions as per the GBP for assessing eligibility to index. In this way The Sub-fund's investment objective is aligned with the reference index.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The methodology of the reference index follows rebalancing rules which ensures alignment with the investment strategy of the Sub-fund.

The Bloomberg MSCI US Green Bond Index is rebalanced on the last business day of each month. New bond issues are not added to the Projected Universe until after the Green Bond Evaluation. On the 25th calendar day of each month, the list of Green Bonds that are evaluated is updated by MSCI ESG Research which are taken into consideration before rebalancing.

23 September 2024 1422 / 1476

How does the designated index differ from a relevant broad market index?

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for eligibility and inclusion of Green Bonds.

Where can the methodology used for the calculation of the designated index be found?

The index methodology can be found on the relevant webpages by the index provider: https://www.msci.com

Where can I find more product specific information online?

It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	the promotes Environmental/Social (E/S) characteristics and while it does not have as it objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective				
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments				

23 September 2024 1424 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

- 1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals (SDGs).
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 4. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.
- 5. The Sub-fund promotes investment in green, social, sustainability and/or sustainability-linked bonds used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

- The proportion of issuers that holds a positive or neutral SDG score based on the internally developed SDG Framework.
- 2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 4. The % of investments excluded from the Worldwide Governance Indicators (WGI) Control of Corruption ranking.
- 5. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

23 September 2024 1425 / 1476

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impact, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the issuer concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the issuer, meaning it is not a sustainable investment.

23 September 2024 1426 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses issuer's positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens issuers on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

What investment strategy does this financial product follow?

Robeco Euro SDG Short Duration Bonds is an actively managed fund that invests in bonds denominated in the EURO currency. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

23 September 2024 1427 / 1476

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

- 1. All bond investments, must have a positive or neutral SDG score.
- 2. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.
- 3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Subfund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
- 4. The Sub-fund excludes sovereign bonds issued by the bottom 15% of the Worldwide Governance Indicators (WGI) Control of Corruption ranking.
- 5. The Sub-fund invests a minimum of 2.5% in green, social, sustainability, and/or sustainability-linked bonds (ESG-labelled bonds). As a second step, amongst others, GHG intensity (Table 1, PAI 15) is assessed in the project evaluation that considers the allocation of proceeds. In addition, the ESG bonds are assessed on their compliance with international norms related to social and governance issues (in relation to Table 1, PAI 16).
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

23 September 2024 1428 / 1476

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the share
 of revenue from
 green activities of
 investee
 companies
- capital
 expenditure
 (CapEx) showing
 the green
 investments made
 by investee
 companies, e.g. for
 a transition to a
 green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Fund, which aims to invest at least 30% of its assets in sustainable investments. The sustainable investments aim to contribute to the UN Sustainable Development Goals. The Sub-fund targets a minimum portion of 30% of its sustainable objectives with a social objective (as measured by positive scores via Robeco's SDG Framework).

The Sub-fund does not specifically target a minimum percentage of its sustainable investments with an environmental objective but it cannot be ruled out that sustainable investments may include those with an environmental objective. The investments in the category "Other", estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

- **#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2** Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green Bonds improves and stabilises.

23 September 2024 1429 / 1476

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for Green Bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹⁰²?

Yes

In fossil gas In nuclear energy

≭ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commits to a minimum share of sustainable investments of 2.5% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in issuers that score positively on

23 September 2024 1430 / 1476

¹⁰² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

activities under the EU Taxonomy.

SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework.

We commit to a minimum share of sustainable investments of 20% with a social objective because the Sub-fund's investment strategy does have a specific social investment objective.

The social objectives of the Sub-fund are attained by investing in issuers that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference
benchmarks are

investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

23 September 2024 1433 / 1476

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The sustainable investments of the Sub-fund contribute to the sustainable investment objective of keeping the maximum global temperature rise well-below 2°C by reducing the carbon footprint of its portfolio. The Sub-fund also promotes investment in green, social, sustainability and/or sustainability-linked bonds used to finance environmental and social projects.

The sustainable investments contribute partly to the environmental objective of Climate Mitigation under the Taxonomy regulation.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

- 1. The Sub-fund's weighted carbon footprint compared to the Paris Aligned Benchmark.
- 2. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.
- 3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
- 4. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris-Aligned Benchmark follow eligibility requirements as per Article 12 of the EU regulation EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks and follows Robeco's Exclusion Policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

All sustainable investments are constituents of Solactive Euro Corporate IG PAB Index or follow the benchmark methodology. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

23 September 2024 1434 / 1476

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as the methodology of the benchmark provider.

environmental,

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, the Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex 1 of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered via the applied normative and activity-based exclusions:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this
 PAI is currently restricted to applying exclusions to palm oil producing companies and for any
 breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to
 biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Via the carbon footprint performance target of the Sub-fund, the PAI on Carbon footprint (PAI 2, Table 1) is considered via the Paris-Aligned Benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this
 PAI is currently restricted to applying exclusions to palm oil producing companies and for any
 breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to
 biodiversity.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Climate Euro Credits is an actively managed fund that invests mainly in Euro denominated nongovernment bonds. The selection of these bonds is based on fundamental analysis as described

23 September 2024 1435 / 1476

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

- 1. The Sub-fund's weighted carbon footprint is better than the Paris Aligned Benchmark.
- 2. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds
- 3. The Sub-fund does not invest in activities that are excluded on the basis of Article 12 of the EU regulation Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks as applicable. In addition, the Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 50% sustainable investments with an environmental objective, measured by the issuers that are part of the Paris-Aligned Benchmark or follow methodology of Paris-Aligned Benchmarks and commitment to invest in Green Bonds. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

23 September 2024 1436 / 1476

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- capital
 expenditure
 (CapEx) showing
 the green
 investments made
 by investee
 companies, e.g.
 for a transition to
 a green economy.
- operational expenditure
 (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging as well as liquidity management. This includes the usage of derivatives to manage currency and duration exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. Derivatives linked to corporate exposure are not allowed.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the climate change mitigation objective under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. Given the current commitment, the expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹⁰³?

Yes:

In fossil gas In nuclear energy

23 September 2024 1437 / 1476

¹⁰³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

≭ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund makes sustainable investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commit to a minimum share of sustainable investments of 50% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies in line with a low carbon scenario as stipulated by the Paris Aligned methodology. Some of these companies with a low carbon footprint may not be exposed to activities that are eligible under the EU Taxonomy.

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund may make sustainable investments off-benchmark, measured as positive scores via Robeco's SDG Framework which are companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially sustainable investments will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Social, sustainability or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, it could be possible that some

23 September 2024 1438 / 1476

for environmentally sustainable economic activities under the EU Taxonomy. companies contribute to social objectives either by being a part of the Paris-Aligned Benchmark or having a positive score via Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Yes, the Sub-fund follows the Solactive Euro Corporate IG PAB Index as a reference index to meet the carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The reference index is aligned with the carbon reduction objective of the Sub-fund by applying a methodology with clearly defined rules for evaluating securities on their carbon footprint.

The methodology of the reference index is designed in accordance with the requirements of point (d) of Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817. This means that amongst others, the reference index complies with those criteria set out in Article 12 of the EU Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks.

The Sub-fund also applies the aforementioned exclusion criteria, and the Sub-fund's weighted carbon footprint score is always equal to or better than the Solactive Euro Corporate IG PAB Index.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

23 September 2024 1439 / 1476

The methodology of the reference index follows rebalancing rules on a monthly basis which ensures alignment with the investment strategy and objective of the Sub-fund. The data used is sourced externally from Institutional Shareholder Services Inc.

How does the designated index differ from a relevant broad market index?

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on greenhouse gas emission reduction and related exclusions.

Where can the methodology used for the calculation of the designated index be found?

The index methodology can be found on the relevant webpages by the index provider: https://www.solactive.com/indices/

6. ASSET ALLOCATION SUB-FUNDS

a) Robeco Sustainable Dynamic Allocation

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental or
social objective,
provided that the
investment does not
significantly harm
any environmental or
social objective and
that the investee

companies follow good governance

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Dynamic Legal entity identifier: 213800GWKC7Z8TN6R360 Allocation

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics for direct holdings in government bonds:

23 September 2024 1441 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- 1. The Sub-fund promotes certain minimal environmental and social standards and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
- The Sub-fund promotes investment in countries with minimum average scores on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates around 50 ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
- 3. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.
- 4. The Sub-fund limits investments in countries that do the most harm to peaceful and inclusive societies for sustainable development.

The Sub-fund has the following E/S characteristics for direct holdings in corporate investments, i.e. equity or bonds:

- The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 3. The Sub-fund promotes investment in a portfolio that avoid significant harm to the Sustainable Development Goals (SDGs).

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in government bonds:

- 1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The average ESG score on Robeco's Country Sustainable Ranking.
- 3. The % of investments excluded based on the WGI Control of Corruption ranking.
- 4. The proportion of countries that hold a high negative score (-3) on SDG 16, based on the internally developed Country SDG Framework.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in corporate investments, i.e. equity or bonds:

- 1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 3. The proportion of companies that hold a high or medium negative SDG score (-3 or -2) based on the internally developed SDG Framework.

23 September 2024 1442 / 1476

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering principal adverse impacts and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

23 September 2024 1443 / 1476

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Regulation for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- o Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behaviour in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 1444 / 1476

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

investment decisions

What investment strategy does this financial product follow?

Robeco Sustainable Dynamic Allocation is an actively managed global multi asset fund. The Sub-fund's objective is to achieve a better return than the index. The Sub-fund has a relatively high risk profile and uses asset allocation strategies mainly investing directly in equities and taking exposure to other asset classes such as, but not exclusively, bonds, deposits and money market instruments. The strategy integrates sustainability indicators on a continuous basis as part of the direct line investments or underlying fund due diligence process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process, and considers those elements in the due diligence of external funds. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements for direct holdings in government bonds:

- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), based on certain exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Subfund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund's investments have a minimum average ESG score of 6 on the Country Sustainability Ranking.
- 3. The Sub-fund excludes sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.
- 4. The Sub-fund excludes all countries which have a high negative score (-3) on SDG 16.

The Sub-fund has the following binding elements for direct holdings in corporate investments, i.e. equity or bonds:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC
 or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms
 will be excluded from the investment universe.
- 3. For corporate bond and equity investments, the Sub-fund excludes all high or medium negative SDG scores (-3 or -2).

23 September 2024 1445 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets.

Good governance

practices include

relations,

sound management

structures, employee

remuneration of staff and tax compliance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure (OpEx)
 reflecting green

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

23 September 2024 1446 / 1476

operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and

EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

23 September 2024 1447 / 1476

In fossil gas In nuclear energy

¹⁰⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentaly sustainable economic activities under the EU Taxonomy.

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?
 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable

23 September 2024 1448 / 1476

investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Sustainable

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities.

Sustainable

investments with an environmental objective might be aligned with the

investment means

an investment in an

economic activity
that contributes to
an environmental or
social objective,
provided that the
investment does not
significantly harm
any environmental or
social objective and
that the investee
companies follow
good governance

b) Robeco Sustainable Income Allocation

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Sustainable Income Allocation

Legal entity identifier: 213800SXP6WFIGLUYC39

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?			
Yes	● ○ 🗶 No		
It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	 ★ It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments ✓ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ★ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ★ with a social objective 		
It will make a minimum of sustainable investments with a social objective: %	It promotes E/S characteristics, but will not make any sustainable investments		

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics for direct holdings in government bonds:

1. The Sub-fund promotes certain minimal environmental and social standards and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory

23 September 2024 1450 / 1476

- (investment) restrictions deriving therefrom.
- The Sub-fund promotes investment in countries with minimum average scores on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates around 50 ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
- 3. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.
- 4. The Sub-fund limits investments in countries that do the most harm to peaceful and inclusive societies for sustainable development.

The Sub-fund has the following E/S characteristics for direct holdings in corporate investments, i.e. equity or bonds:

- The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 3. The Sub-fund promotes investment in a portfolio that avoid significant harm to the Sustainable Development Goals (SDGs).

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in government bonds:

- The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The average ESG score on Robeco's Country Sustainable Ranking.
- 3. The % of investments excluded based on the WGI Control of Corruption ranking.
- 4. The proportion of countries that hold a high negative score (-3) on SDG 16, based on the internally developed Country SDG Framework.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in corporate investments, i.e. equity or bonds:

- 1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 3. The proportion of companies that hold a high or medium negative SDG score (-3 or -2) based on the internally developed SDG Framework.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework

23 September 2024 1451 / 1476

based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering principal adverse impacts and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1452 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Regulation for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behaviour in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

23 September 2024 1453 / 1476

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance. No

What investment strategy does this financial product follow?

Robeco Sustainable Income Allocation is an actively managed fund that invests in a mix of asset classes across the world. The Sub-fund's objective is to achieve long term capital growth whilst maintaining a consistent level of income. The Sub-fund has a relatively low risk profile and uses asset allocation strategies mainly investing directly in bonds and taking exposure to other asset classes such as, but not exclusively, equities. The asset allocation strategy is subject to investments and volatility restrictions. The strategy integrates sustainability indicators on a continuous basis as part of the direct line investments or underlying fund due diligence process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process, and considers those elements in the due diligence of external funds. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements for direct holdings in government bonds:

- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), based on certain exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Subfund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund's investments have a minimum average ESG score of 6 on the Country Sustainability Ranking.
- 3. The Sub-fund excludes sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.
- 4. The Sub-fund excludes all countries which have a high negative score (-3) on SDG 16.

The Sub-fund has the following binding elements for direct holdings in corporate investments, i.e. equity or bonds:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 3. For corporate bond and equity investments, the Sub-fund excludes all high or medium negative SDG scores (-3 or -2).

23 September 2024 1454 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share

Asset allocation

describes the share of investments in specific assets.

Good governance

practices include

relations,

sound management

structures, employee

remuneration of staff and tax compliance.

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

23 September 2024 1455 / 1476

activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

O%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power

Does the financial product invest in fossil gas and/or nuclear energy related activitie that comply with the EU Taxonomy? ¹⁰⁵					
Yes					

	In fossil gas	In nuclear energy
No		

23 September 2024 1456 / 1476

¹⁰⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentaly sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities? 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

23 September 2024 1457 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

c) **Robeco Sustainable Diversified Allocation**

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow

good governance

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Diversified Allocation

Legal entity identifier: 2138005MYFA3NB4P5T55

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?			
•	Yes	• No	
	It will make a minimum of sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
	It will make a minimum of sustainable investments with a	It promotes E/S characteristics, but will not make any sustainable investments	

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics for direct holdings in government bonds:

Sustainability indicators measure The Sub-fund promotes certain minimal environmental and social standards and therefore applies how the exclusion criteria with regards to products and business practices that Robeco believes are environmental or detrimental to society and incompatible with sustainable investment strategies, such as exposure social characteristics to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in promoted by the government bonds (federal or local) of countries where serious violations of human rights or a financial product are collapse of the governance structure take place as unsustainable. In addition, Robeco will follow attained.

23 September 2024 1459 / 1476

- applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
- 2. The Sub-fund promotes investment in countries with minimum average scores on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates around 50 ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
- 3. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.
- 4. The Sub-fund limits investments in countries that do the most harm to peaceful and inclusive societies for sustainable development.

The Sub-fund has the following E/S characteristics for direct holdings in corporate investments, i.e. equity or bonds:

- 1. The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
- 3. The Sub-fund promotes investment in a portfolio that avoid significant harm to the Sustainable Development Goals (SDGs).

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in government bonds:

- 1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The average ESG score on Robeco's Country Sustainable Ranking.
- 3. The % of investments excluded based on the WGI Control of Corruption ranking.
- 4. The proportion of countries that hold a high negative score (-3) on SDG 16, based on the internally developed Country SDG Framework.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in corporate investments, i.e. equity or bonds:

- The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- 3. The proportion of companies that hold a high or medium negative SDG score (-3 or -2) based on the internally developed SDG Framework.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals

23 September 2024 1460 / 1476

such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering principal adverse impacts and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

23 September 2024 1461 / 1476

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-

corruption and anti-

bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Regulation for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behaviour in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

23 September 2024 1462 / 1476

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Sustainable Diversified Allocation is an actively managed fund that invests in a mix of asset classes across the world. The Sub-fund's objective is to achieve a better return than the index. The Sub-fund has a balanced risk profile and uses asset allocation strategies mainly investing directly in equities and bonds and taking exposure to other asset classes such as, but not exclusively, derivatives, deposits and money market instruments. The strategy integrates sustainability indicators on a continuous basis as part of the direct line investments or underlying fund due diligence process.

Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process, and considers those elements in the due diligence of external funds. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements for direct holdings in government bonds:

- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), based on certain exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Subfund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund's investments have a minimum average ESG score of 6 on the Country Sustainability Ranking.
- 3. The Sub-fund excludes sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking
- 4. The Sub-fund excludes all countries which have a high negative score (-3) on SDG 16.

The Sub-fund has the following binding elements for direct holdings in corporate investments, i.e. equity or bonds:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
- 3. For corporate bond and equity investments, the Sub-fund excludes all high or medium negative SDG scores (-3 or -2).

23 September 2024 1463 / 1476

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation

describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- expenditure (OpEx)
 reflecting green
 operational
 activities of
 investee

23 September 2024 1464 / 1476

companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?¹⁰⁶

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

	Yes		
		In fossil gas	In nuclear energy
K	No		

23 September 2024 1465 / 1476

S2978D-202409

¹⁰⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?
 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Subfund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Subfund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

23 September 2024 1466 / 1476

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics

that they promote.

Not applicable.

d) Robeco Flexible Allocation

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow

good governance

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Flexible Allocation **Legal entity identifier:** 213800K1HHD25EVUAK49

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?				
● ○ 🗶 No				
It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 0% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective				
It promotes E/S characteristics, but will not make any sustainable investments				

23 September 2024 1468 / 1476

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics for direct holdings in government bonds:

- 1. The Sub-fund promotes certain minimal environmental and social standards and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
- 2. The Sub-fund promotes investment in countries with minimum average scores on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates around 50 ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
- 3. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.

The Sub-fund has the following E/S characteristics for direct holdings in corporate investments, i.e. equity or bonds:

- The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels.
- 2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
- 3. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in government bonds:

- 1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
- 2. The average ESG score on Robeco's Country Sustainable Ranking.
- 3. The % of investments excluded based on the WGI Control of Corruption ranking.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in corporate investments, i.e. equity or bonds:

 The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.

23 September 2024 1469 / 1476

- 2. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 3. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

While the Sub-fund does not intend and commits to make investments considered as sustainable investments as defined under the SFDR Regulation (EU) 2019/2088, it may make such investments.

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

While the Sub-fund does not commit to make investments considered as sustainable investments as defined under the SFDR Regulation (EU) 2019/2088, it may make such investments.

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering principal adverse impacts and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

While the Sub-fund does not commit to make investments considered as sustainable investments as defined under the SFDR Regulation (EU) 2019/2088, it may make such investments.

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

23 September 2024 1470 / 1476

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

While the Sub-fund does not commit to make investments considered as sustainable investments as defined under the SFDR Regulation (EU) 2019/2088, it may make such investments.

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Regulation for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-

23 September 2024 1471 / 1476

corruption and antibribery matters.

- any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Flexible Allocation is an actively managed global multi asset fund. The aim of the Sub-fund is to achieve long term capital growth by taking global exposure to asset classes such as equities, bonds, deposits, Alternative Investments and/or other generally accepted asset classes. The Sub-fund applies a flexible allocation strategy, which means the Sub-fund's portfolio composition will be determined and adjusted based on market conditions. The strategy integrates sustainability indicators on a continuous basis as part of the direct line investments or underlying fund due diligence process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process, and considers those elements in the due diligence of external funds.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements for direct holdings in government bonds:

- The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), based on certain exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- 2. The Sub-fund's investments have a minimum average ESG score of 6 on the Robeco Country Sustainability Ranking.

23 September 2024 1472 / 1476

3. The Sub-fund excludes sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.

The Sub-fund has the following binding elements for direct holdings in corporate investments, i.e. equity or bonds:

- 1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
- The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
- 3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry- established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the

What is the asset allocation planned for this financial product?

At least 70% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund does not plan to make sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of

23 September 2024 1473 / 1476

investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of
 investee
 companies.

investments in the category Other, estimated between 0-30%, are mostly in cash, cash equivalents and derivatives as further described below, as well as investment funds and eligible asset classes other than bonds and equities that do not specifically promote E/S characteristics. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

23 September 2024 1474 / 1476

No

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹⁰⁷?

Yes

In fossil gas

In nuclear energy

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
- What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

0%

What is the minimum share of socially sustainable investments?

0%

23 September 2024 1475 / 1476

¹⁰⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.
